SOCIAL STATISTICS.

Report submitted by EPIFANIO DE LOS SANTOS,
Assistant Director of the Census.

I. SUBJECTS DISCUSSED.

Publications—Libraries—Free Dispensaries, Centers for the Care of Children, and Charitable Institutions—Hospitals, Sanatoriums, Patients Registered in 1918, and Most Common Diseases—Agricultural Credit Coöperative Associations—Clubs and Civic Associations—Churches—Pauperism—Wages—Real Property—Revenue Collections and Expenses of Provincial Governments—Consolidated Income and Expenses of the Philippine Government.

Such are the subject-matters of *Schedule No. 5*, entitled *Social Statistics*. The presidents of the municipal census boards, who were the municipal presidents, had been charged with the collection of the required information; but in some cases as, for example, for certain libraries, special enumerators and agents were appointed. The Census inspectors and the directors of several Government bureaus whose assistance was solicited also furnished some of the data which make up the following tables.

The schedule follows:

GOVERNMENT OF THE PHILIPPINE ISLANDS—CENSUS OFFICE.
GOBIERNO DE LAS ISLAS FILIPINAS—OFICINA DEL CENSO.

SECOND CENSUS, 1918.—SEGUNDO CENSO, 1918.

SCHEDULE No. 5—SOCIAL STATISTICS.
PLANILLA NO. 5—ESTADÍSTICA SOCIAL.

.....	{ Census District.		{ Inspection District.
.....	{ Distrito del Censo.		{ Distrito de Inspección
.....	{ Island.		{ Municipality.
.....	{ Isla.		{ Municipio.
.....	{ Province.		{ Special Enumerator.
.....	{ Provincia.		{ Enumerador Especial.

Sheet No. {
Hoja No. {

This schedule begun { 191.. } and completed by me { 191..
Empezada esta planilla { } y terminada por mí {

NOTE.—The data to be entered on this schedule refer to the municipality as a whole. If, for example, there is more than one public library in the municipality, the required totals for each must be ascertained, and these totals added to find the correct entries on the line to the right of "Public" in the third table; etc. (NOTA.—Los datos que han de notarse en esta planilla se refieren al municipio considerado como un todo. Si, por ejemplo, hay más de una biblioteca pública en el municipio, los totales requeridos para cada una deben hallarse, y estos totales sumarse para inscribir correctos asientos en la línea a la derecha de "Públicas" en el cuadro número 3; etc.)

Write in the table below only those general crops the annual yield of which last year was appreciably larger or smaller per unit of area than the average annual yield for past years in this municipality, using the same unit of area throughout. (Escribanse en el cuadro siguiente solamente las cosechas ordinarias de las cuales la cantidad producida por unidad de superficie durante el año pasado fué notablemente mayor o menor que el promedio anual de los años pasados en este municipio, usando siempre la misma unidad de superficie.)

[illegible]

Write in the table below the names of the periodicals, books, pamphlets, etc., which have been printed in this municipality during the year 1918. (Escribanse en el cuadro siguiente los nombres de los periódicos, libros, folletos, etc., impresos en este municipio durante el año 1918.)

3. LIBRARIES.—BIBLIOTECAS.

	NUMBER. Número.	NUMBER OF VOLUMES BY DIALECTS AND LANGUAGES. Número de volúmenes por dialectos e idiomas.				
		PHILIPPINE DIALECTS. Dialectos Filipinos.	ENGLISH. Inglés.	SPANISH. Español.	OTHER LAN- GUAGES. Otros Idi- omas.	TOTAL.
Public (Públicas)						
Private (Privadas)						
TOTAL						

4. HOSPITALS AND SANATORIUMS.—HOSPITALES Y SANATORIOS.

	NUMBER. Número.	PATIENTS REGISTERED IN 1918. Pacientes inscritos en 1918.
Public (Públicos).....		
Private (Privados).....		
TOTAL.....		

5. Number of free dispensaries? (¿Número de dispensarios gratuitos?)
6. Number of "Gota de Leche" or children's welfare centers. (Número de "Gota de Leche" o centros de puericultura)
7. Names of the institutions of charity. (Nombres de las instituciones benéficas)
8. What are the commonest diseases in hospitals and sanatoriums? (¿Cuáles son las enfermedades más comunes en los hospitales y sanatorios?)
9. (a) Number of rural credit associations and actual membership of each one. (Número de sociedades de crédito rural y número actual de socios de cada una)
- (b) Amount of paid up capital stock. (Capital social pagado)
- (c) Amount of loans made by the association until "Census Day." (Préstamos hechos por la asociación hasta el "Día del Censo.")
10. Number of clubs and societies and actual membership of each one. (Número de clubs y asociaciones cívicas y número actual de socios de cada uno)

11. PLACES OF WORSHIP.—TEMPLOS.

	NUMBER. Número.	CAPACITY. Capacidad.	VALUE. Valor.
Catholic (Católicos).....			
Protestant (Protestantes).....			
Others (Otros).....			
TOTAL.....			

12. PAUPERS.—POBRES.

[Number of paupers cared for during 1918.—Número de pobres mantenidos en 1918.]

NUMBER OF PERSONS CAPABLE OF EARNING A LIVING IN PART. Número de capaces para ganar la vida en parte.	NUMBER OF DEFECTIVE PERSONS, INCAPABLE OF EARNING A LIVING. Número de defectuosos, incapaces para ganar la vida.	TOTAL.

13. WAGES.—JORNALES.

[Average daily wage of laborers.—Promedio del jornal de obreros.]

Unskilled laborers (Obreros no clasificados).....	P.....	Silversmith (Plateros).....	P.....
Carpenters (Carpinteros).....	P.....	Coachmen (Cocheros).....	P.....
Masons (Albañiles).....	P.....	Painters (Pintores).....	P.....
Blacksmiths (Herreros).....	P.....	Shoemakers (Zapateros).....	P.....
Cigar makers (Cigarreros).....	P.....	Wood carvers (Tallistas).....	P.....
Embroiderers (Bordadoras).....	P.....	Chaufeurs.....	P.....
Collectors of coconut sap (Manan- guiteros).....	P.....		

II. PUBLICATIONS.

(a) PERIODICALS.

Tables 1 and 2 show the existence in 1918 of 114 newspapers and reviews, of which 45 were newspapers and 69 reviews, distributed thus:

In English	28
In Spanish	27
In native tongues	24
In other languages (2 Chinese and 1 Japanese)	3
Bilingual (English-Spanish)	14
Bilingual (English-Tagalog)	2
Trilingual (English-Spanish-Chinese)	1
Bilingual (Spanish and native tongue): 5 in Spanish and Visayan; 2 Spanish-Ilocano; 3 Spanish-Tagalog; 1 Spanish-Pangasinan; 1 Spanish-Bicol; 2 Spanish-Cagayan; 1 Spanish-Moro	15
Total	114

Twenty-two newspapers and reviews in English and 18 in Spanish were published in Manila; 9 of the former (3 in English and 6 in Spanish) were dailies. The total circulation of publications amounted to 276,560 copies, which represents a rate of one copy for 34 inhabitants.¹

The following table gives an idea of the results of both censuses:

Year.	Total.	English.	Spanish.	Dialect.	Other languages.	Bilingual (English-Spanish).	Bilingual (English-Native Tongue).	Trilingual (English-Spanish-Chinese).	Bilingual (Spanish-Native Tongue).	Number of copies.	Number of inhabitants per copy.
1903	41	12	24	4	1					68,236	150
1918	114	28	27	24	3	14	2	1	15	276,560	34

During the last 15 years the number of publications in English more than doubled; those in Spanish increased by three, while the number of those in native tongues increased to five times what it was. While the Spanish language and the native tongues

¹ The total circulation given above is made up of the following figures: 263,260, the total returned, and 13,300, the estimated number of copies of 17 publications, the circulation of which was not reported.

were principally used in 15 publications, English was also used in 2 of them. Hence, the accessibility of the Spanish language, through its use side by side with the vernacular, to the mass of the people or the majority of the readers, is eight times greater than that of the English.

The Census of 1903 apportioned one copy to each 150 inhabitants, and the Census of 1918, one copy to each 34 inhabitants. This result is based on the supposition that all readers buy the periodicals read by them, which is not true in the Philippines. In a house inhabited by one, two or more families, every one reads the periodical of only one subscriber. Moreover, residents of a street or a small village read, one after the other, the only periodical bought in the locality. There is no barbershop, office or store where there cannot be found at least one or more periodicals at the disposal of the customers. Each is informed of the daily topics by those who read them, and groups of neighbors comment and debate on these topics. If the newspaper or magazine is written in the vernacular, the free reading circle is still greater. The number of copies issued by a publication does not indicate the number of its readers. Although the rate is 34 inhabitants per copy, there is, as a matter of fact, no Filipino, whether or not able to read, who is not informed of current events by the press or has, perhaps, had the benefit of a debate on current topics.

(b) BOOKS AND PAMPHLETS.

In enumerating the books printed during the year 1918, those of an official character, that is to say, printed matter of the Philippine Government and its dependencies, either Insular, provincial or municipal, has been omitted. If it were included, Manila alone would show thousands. It will be seen that Table 3 registers 18 books written in English, 23 in Spanish, and 26 in local dialects, with a total edition of 41,580, 42,300, and 144,951, respectively. It was not possible to ascertain the number of copies printed of 7 books in English, 12 in Spanish, and 2 in native tongues. As regards English and Spanish books, Manila is in the lead, but this is not the case with books in the native tongues, so far as numbers are concerned. On the other hand, vernacular works are more popular, hence the number of books written in native tongues is the largest.

What has been said of books may be applied to the pamphlets, enumerated in Table 4. There have been omitted, not only

those of an official character, but even those which, because of their direct connection with governmental offices, share such a character, as for example, lawyer's briefs, which alone amounted to 1,612 in 1918. For this reason Table 4 only records 19 pamphlets in English, 41 in Spanish, and 69 in local dialects, with the totals of 3,800, 109,843, and 353,330, respectively. No report has been received as to the number of copies issued for 15 pamphlets in English, 18 in Spanish, and 7 in local dialects. As regards the number of pamphlets written in English and Spanish, Manila shows the greatest number, but as to those in the vernacular, the Provinces of Cebu, Manila, and Rizal lead.

III. LIBRARIES.

(a) PUBLIC.

By public libraries are meant those of the Insular, provincial, and municipal governments, to which the public has more or less access. The following comparative table shows their existence in the years 1903 and 1918, and a specification of the number of volumes in native tongues, English, Spanish, and other languages.

Years.	Number of libraries.	Number of volumes in native tongues.	Number of English volumes.	Number of Spanish volumes.	Number of volumes in other languages.	Total.
1903.....	12	513	1,067	2,421	18	4,019
1918.....	360	4,330	472,275	67,522	32,015	576,142

* Table No. 5.

The difference in the number of libraries shown by the two censuses is striking. In 1903 there were only 12 libraries in the entire Archipelago. In Manila there was one, but it being a circulating library, it was not even enumerated, and it was only at the end of 1907, when the American Circulating Library and the old Museum-Library were combined, that 829 volumes, consisting of books, pamphlets, and periodicals, could be gathered. Act No. 2572, which provided for the reorganization of the libraries in Manila belonging to the Government and created by other acts, among them, Act No. 1935, made it possible for the Philippine Library and Museum to report, on December 31, 1918, approximately 354,719 volumes in Manila and 3,586 in Iloilo. This library was so well frequented that notwithstanding the exodus of many readers, on account of the war, its book circulation during 1918, exclusive of that of the Legislative Reference Division, amounted to 114,498 volumes. There is but one public library, strictly speaking, which is the Philippine Library and Museum, but owing to a certain administrative autonomy enjoyed by some branches of the Insular Government, the libraries of the Supreme Court, the Bureau of Justice, the City Fiscal's Office, and the Bureau of Science had to be enumerated sep-

arately. The following is a tabulation of the data pertaining to the same:

	Native tongues.	English.	Spanish.	Other lan- guages.	* Total.
Total.....	2,793	378,390	61,282	30,641	473,106
Philippine Library and Museum.....	2,771	293,251	54,626	4,071	354,719
Supreme Court.....		11,145	1,895	108	13,148
Attorney-General's Office.....		4,726	991		5,717
Office of the Fiscal for the city of Manila.....		2,074	310	13	2,397
Bureau of Science.....	22	67,194	3,460	26,449	97,126

The number of English volumes surpasses all others; next come Spanish volumes, and then volumes written in other languages. The number of volumes written in the native tongues is not even one-half of the number of those written in other languages. This is not the case, however, with the newspapers, of which the greatest number is published in Spanish and in the native tongues. The libraries of the Supreme Court, the Attorney-General, and the City Fiscal's Office do not contain a single volume written in the vernacular and have very few books in other languages. English books make up the bulk of these libraries and Spanish books occupy the second place, owing to the fact that some Spanish laws are still in force in the Islands. A similar proportion exists in the Philippine Library and Museum, because of the good Spanish historical works. In the library of the Bureau of Science, the volumes written in other languages are nine times the number of those written in Spanish, since legal and historical Spanish books are of little use in that Bureau. There the Spanish books in number occupy only the fourth place; the first, second, and third places are taken by English, German, and French books, respectively. Of the five libraries enumerated in Manila, the Philippine Library and Museum is the most popular. During the year 1918, 93,805 books were read, of which 39,114 were works of fiction and 54,691, miscellaneous books.

(b) SEMI-PUBLIC.

Semi-public libraries are the libraries of the Bureau of Education scattered throughout the Islands; those of other branches of the Insular Government not enumerated in Table 5; and those of religious corporations and civic associations. Unlike the public libraries, the semi-public libraries, notwithstanding the fact that the great majority of the books of the Bureau of Education are books in English, show a greater number of Spanish volumes. This is due to the fact that in Manila alone, out of a total of 325,347 volumes (Table 6) belonging to 65 semi-public libraries, 55,315 volumes belong to religious and similar corporations. Further details about semi-public libraries will be found in the following table:

Semi-public libraries.

[Religious corporations.]

Manila (city).	Number of libraries.	Philippine tongues.	English.	Spanish.	Other languages.	Total.
Total	11	1,141	5,331	55,315	* 27,993	89,780
Dominican fathers	4	152	2,209	21,991	11,990	36,342
Franciscan fathers	1	8	2	8,091	2,180	10,281
Recollet fathers	1	54		2,216	2,640	4,910
Jesuit fathers	1	500	1,300	5,570	3,350	10,720
Augustinian fathers	1	267	708	7,227	6,524	14,726
Paulist fathers	1	50	250	3,000	584	3,884
Benedictine fathers	1	100	850	6,500	500	7,950
College of Trebles	1	10	12	720	225	967

The Provinces of Batangas, Bulacan, Cebu, Ilocos Sur, and Iloilo come after Manila in the number of Spanish books. English prevails, however, in 29 provinces out of the 38 enumerated. The semi-public libraries, therefore, contain a greater number of books written in Spanish, but there is a wider distribution of English books.

IV: FREE DISPENSARIES, CENTERS FOR THE CARE OF CHILDREN, AND CHARITABLE INSTITUTIONS.

On December 31, 1918, 537 free dispensaries, 62 centers of puericulture, and 91 charitable institutions were enumerated. (Table 7.)

Approximately 461 free dispensaries were public. Of the centers of puericulture and "Gotas de Leche" (free milk dispensaries for infants), only 16 were subsidized by the Government under Act No. 2633; 46 were branches thereof supported by philanthropists or philanthropic entities, and some were about to be subsidized. On Census Day, the provinces having subsidized charitable institutions were Bulacan, 2; Iloilo, 1; Laguna, 2; La Unión, 1; Manila, 1; Occidental Negros, 1; Nueva Ecija, 1; Pangasinan, 1; Rizal, 1; Romblon, 1; Tayabas, 3, and Zamboanga, 1.

Of the 91 charitable institutions enumerated, 31 are in Manila; these are the following:

Charitable institutions in Manila.

Names.	Districts or streets.
Philippine Orphanage Association.....	Agno.
Chinese Hospital (Comunidad de Chinos).....	Blumentritt.
Hospital de Santiago.....	Azcarraga.
The Day Nursery.....	Malate.
San Lazaro Hospital.....	Rizal Avenue.
Day Nursery.....	Tondo.

Sampaloc Health Station, Philippine Health Service.....	Sampaloc.
Liga Nacional Filipina.....	Lipa, Sampaloc.
Liga Nacional Filipina.....	Morga, Tondo.
Hospital de San Juan de Dios.....	Intramuros.
Saint Paul's Hospital.....	Do.

V. HOSPITALS, SANATORIUMS, PATIENTS REGISTERED, AND MOST COMMON DISEASES.

Ninety-five was the number of hospitals, both public and private, enumerated at the time of taking the Census, and 161,229 the number of registered patients (Table 8). The hospital in Ambos Camarines, the two in Palawan, the Rizal Memorial Hospital in Dapitan, Cervantes Hospital, and Kiangnan Hospital, could not be enumerated. Although in 1903, 70 hospitals were enumerated, and the number of patients under treatment totalled 11,558, a comparison between the two Censuses is very difficult, because of the different circumstances prevailing at the time when the data for each were taken. In 1918, there was not only a greater degree of comfort in hospitals, a greater character of permanence, a larger supply of medicine in the free dispensaries, and a systematic organization of the sanitary force, but in 1903 the suspicion and plots against forcible hospitalization among the masses of the people (resulting in the hiding of cases and the consequent increase of contagious diseases, some of which found a favorable vehicle in the bad water used because of the lack of artesian wells) rendered it impossible in 1903 for the census employees to make a reliable enumeration of the patients under treatment. The error was made still worse by confusion in the classification of certain diseases. Moreover, in 1918, there were patients in the hospitals who endeavored to be admitted therein for the purpose of securing a comfortable and cheap or free boarding place. As a result, in spite of the progress made in personal hygiene and of the abundance and excellent quality of the water supplied by artesian wells, hospitals were overcrowded with patients in 1918. Besides, in 1903, the hospitals, mostly military, were of temporary character.

The following table is, with certain limitations, a fairly complete index of the most common diseases which prevailed in 1918 in the provinces and subprovinces therein mentioned.

MOST COMMON DISEASES IN HOSPITALS AND SANATORIUMS, BY PROVINCES AND SUBPROVINCES.

- (1) TYPHOID FEVER: Albay, Cagayan, Cebu, Isabela, Lanao, Mindoro, Misamis, Palawan, and Samar.
- (4) MALARIA: Agusan, Ambos Camarines,¹ Bataan, Bontoc (subprovince), Bulacan, Cagayan, Cotabato, Davao, Iloilo, Ilocos Norte, Isabela, Laguna, Lanao, Lepanto-Amburayan (subprovince), Manila, Mindoro, Misamis, Occidental Negros, Nueva Ecija, Palawan, Pangasinan, Sulu, Tayabas, and Zamboanga.
- (5) SMALLPOX: Bataan, Bohol, Bulacan, Cebu, Laguna, Lanao, Manila, Pangasinan, Rizal, Samar, Sorsogon, and Zamboanga.

¹ An Act was passed by the Philippine Legislature, March, 1919, authorizing the Governor-General to separate Ambos Camarines into the Provinces of Camarines Sur and Camarines Norte.

- (8) WHOOPING COUGH: Bohol and Rizal.
- (10) INFLUENZA: Albay, Ambos Camarines, Bataan, Benguet (subprovince), Bohol, Bontoc (subprovince), Bulacan, Cebu, Cotabato, Davao, Ilocos Sur, Isabela, Laguna, Lepanto-Amburayan (Subprovince), Leyte, Manila, Mindoro, Misamis, Oriental Negros, Pangasinan, Rizal, Samar, Sorsogon, and Zamboanga.
- (12) ASIATIC CHOLERA: Misamis.
- (14) DYSENTERY: Agusan, Albay, Bohol, Cagayan, Cotabato, Davao, Iloilo, Ilocos Sur, Laguna, Lanao, Lepanto-Amburayan (subprovince), Manila, Misamis, Occidental Negros, Palawan, and Rizal.
- (17) LEPROSY: Palawan.
- (24) TETANUS: Palawan.
- (27) BERIBERI: Bulacan, Cebu, Davao, Laguna, Lanao, Leyte, Manila, Mindoro, Misamis, and Zamboanga.
- (27a) INFANTILE BERIBERI: Albay and Isabela.
- (28) TUBERCULOSIS OF THE LUNGS: Albay, Ambos Camarines, Benguet (subprovince), Capiz, Iloilo, Ilocos Sur, Isabela, Leyte, Manila, Mindoro, Misamis, Occidental Negros, Nueva Ecija, Palawan, Rizal, and Sorsogon.
- (33) WHITE SWELLINGS: Bohol.
- (34) TUBERCULOSIS OF OTHER ORGANS: Davao.
- (37-38) VENEREAL DISEASES: Manila, Samar, and Tayabas.
- (39-45) CANCER (all forms): Pangasinan.
- (47) ACUTE ARTICULAR RHEUMATISM: Ambos Camarines, Bohol, and Cotabato.
- (54) ANAEMIA, CHLOROSIS: Bontoc (subprovince) and Rizal.
- (61) SIMPLE MENINGITIS: Cebu and Leyte.
- (79) ORGANIC DISEASES OF THE HEART: Manila.
- (89-90) BRONCHITIS (acute and chronic): Albay, Capiz, Cebu, Cotabato, Lanao, Leyte, Mindoro, Nueva Vizcaya, Rizal, and Tayabas.
- (92) PNEUMONIA: Benguet (subprovince), Manila, and Mindoro.
- (104-5) DIARRHOEA AND ENTERITIS: Albay, Benguet (subprovince), Cebu, Cotabato, Iloilo, Leyte, Misamis, Rizal, and Zamboanga.
- (107) INTESTINAL PARASITES: Iloilo, Laguna, Lanao, Manila, Occidental Negros, Sulu, and Zamboanga.
- (108) APPENDICITIS AND TYPHLITIS: Pangasinan.
- (123) CALCULI OF THE URINARY PASSAGES: Palawan.
- (132) SALPINGITIS AND OTHER DISEASES OF THE FEMALE GENITAL ORGANS: Ambos Camarines.
- LABOR (normal): Manila.
- (137) PUERPERAL SEPTICAEMIA: Bohol, Leyte, Manila, Misamis, Occidental Negros, Palawan, and Pangasinan.
- (138) PUERPERAL ALBUMINURIA AND CONVULSIONS: Bataan, Iloilo, Leyte, and Occidental Negros.
- (144) ACUTE ABSCESS: Leyte.
- (145) OTHER DISEASES OF THE SKIN AND ANNEXA: Benguet (subprovince), Bohol, Bulacan, Capiz, Cotabato, Davao, Ilocos Norte, Lanao, Leyte, Mindoro, Occidental Negros, Oriental Negros, Palawan, and Rizal.
- (189) SURGICAL CASES: Bontoc (subprovince).

NOTE.—The numbers in parentheses represent the order as given in the Manual of the International List of Causes of Death, Washington, D. C., 1918.

Influenza assumed a pandemic character in the months of October and November, rendering hospitalization impossible. The case was different as to cholera and smallpox, in which hospitalization could be employed as a radical measure. Malaria was endemic in many localities, but most cases were so mild that it was not considered necessary by the patients to go to the hospital, because after each attack they were able to resume their work. Beriberi became endemic on account of certain foods which make the islanders especially susceptible to it. Dysentery was epidemic in some provinces, sometimes coinciding with the appearance of cholera. With respect to tuberculosis, it may be stated that at present there is scarcely a town or barrio exempt from its ravages. Typhoid fever had no chance to spread widely, because of the good water furnished by the artesian wells. Bronchitis, which used to appear periodically every year, though not of itself serious, sometimes became so through its being considered a negligible disease for which the patients did not care to seek treatment, and thus, with lowered vitality, they often acquired a more serious disease, such as tuberculosis. Skin diseases like scabies, herpes, etc., are prevalent in many places, especially among the poor classes, owing to their ignorance or neglect of personal hygiene, and to the harmful belief that if cured from any illness like these, the patient would assuredly be visited by a more serious disease. And, lastly, intestinal parasites were predominant, particularly outside of Manila, due to the insanitary manner of disposing of human excreta. (Table 9.)

VI. AGRICULTURAL CREDIT COÖPERATIVE ASSOCIATIONS.

Act No. 2508, passed on February 5, 1915, as amended by Act No. 2566, regulates the creation and operation of "agricultural credit coöperative associations," and sets forth as its purpose the following:

"SEC. 2. It shall be the purpose of the aforesaid associations to accumulate funds, by means of coöperation, in order to extend to their members credit on reasonable terms for exclusively agricultural operations, and to encourage thrift, activity, and punctuality in meeting obligations among said members."

They may engage in the following operations:

"(a) Extend credit to the members of the association:

"1. For the expenses of securing title to, and the registration of, their land under Act Numbered Four hundred and ninety-six, and for purchasing and securing title to new agricultural land;

"2. For the purchase of live stock, fertilizers, preparations for the destruction of pests of various kinds, seeds, machinery, or implements which the borrower shall use for agricultural purposes exclusively;

"3. For the redemption of incumbrances on agricultural lands;

"4. For the cultivation and improvement of such lands;

"5. For the expenses in connection with the planting, cultivation, harvesting, or care of any agricultural crop or product, or storage and housing until sold or marketed;

"6. Upon gathered products stored in a safe place and at the disposal of the association, in a sum not to exceed fifty per centum of the fair market value of such gathered products;

"7. For the construction, repair, and maintenance of works for irrigation or drainage of land.

"(b) Open credits in current account, with interest, with the members of the association.

"(c) Acquire or purchase seeds, fertilizers, preparations for the destruction of pests of various kinds, machinery, livestock, and agricultural implements of any kind and sell the same to the members of the association.

"(d) Contract loans and receive deposits in order to increase their working and circulating capital."

The first association of this kind was inaugurated at Cabatuan, Nueva Ecija, and incorporated on October 19, 1916. Then the idea and its adoption was so rapidly and steadily ex-

tended that on Census Day their number amounted to 243, distributed in 36 provinces. From Table 10 their number, stockholders, paid-up capital, and loans made in 1918 can be ascertained. This is a coöperative system devised for small capitals, preparatory for the management of greater ones. No municipality may have more than one association, and aside from the prohibition of collecting over 10 per cent interest, when the assets of an association do not exceed ₱10,000, it is exempted from certain legal taxes, and entitled, further, to

“(j) . . . receive from their provincial boards, the postal savings banks, the Agricultural Bank of the Philippine Islands, or from similar agricultural credit coöperative associations loans or deposits, as may be granted to them, upon the security of the property belonging or mortgaged to them; the total of said loans and deposits not to exceed one-half of their paid-up capital stock.”

Finally, the supervision exercised by the Government, through the Director of Agriculture, does not only assure the good administration of these associations, but also tends to inspire confidence in the members.

But as the members of these associations belong practically all to the working classes, and as a majority of them do not even own the small tracts of land cultivated by them and are not familiar with the administrative procedure, they cannot easily secure bank loans. For this reason, all that could be obtained until December, 1918, was the securing by 15 associations from the Philippine National Bank of loans equal to their paid-up capitals, on the security of said capitals and the promissory notes jointly and severally executed by five directors of each association, at the rate of 8 per cent per annum. Said loans, turned over to the members at 10 per cent, give the associations a net profit of 2 per cent per annum.

VII. CLUBS AND CIVIC ASSOCIATIONS.

The state of peace that prevailed in the last decade was propitious to the multiplication of recreative and civic associations. Five hundred and seventy-five clubs of various denominations were enumerated; the total number of their members was 45,669. The aggregate number of civic associations was 561, and their total membership amounted to 205,084. As regards the number of clubs, Manila was surpassed by Pangasinan, Ilocos Norte, and Ilocos Sur, respectively, but in regard to associations, Manila predominates over all the provinces in number and membership. Thus, while the 159 associations enumerated in Manila have a total membership of 164,329, Ilocos Norte, which comes next, has 103 associations with only 4,750 members. (Table 11.)

VIII. CHURCHES.

According to the data furnished by Tables 12 and 13, the number of churches in the Philippines and their average capacity and value are as follows:

CATHOLIC.....	Number	2,778
	Average capacity	1,057
	Average value in pesos.....	18,967
PROTESTANT.....	Number	486
	Average capacity	257
	Average value in pesos.....	1,518
AGLIPAYAN.....	Number	540
	Average capacity	389
	Average value in pesos.....	980
MOHAMMEDAN.....	Number	52
	Average capacity	158
	Average value in pesos.....	329

The number of Catholic churches registered in 1903 was 1,573, and that of Protestant churches of all denominations, 35. In 1918 the aggregate number of Catholic churches was 1,205 and that of Protestant churches 451. This shows a considerable increase in the number of Catholic churches, but their number was not doubled, because this is practically a Catholic country, while of Protestant churches, there were 12 times more than in 1903, that is, nearly one-third of the increase of Catholic churches. Besides, the churches registered in 1903 were only Catholic and Protestant churches of all denominations, there being no Aglipayan and Mohammedan churches. The considerable increase in the number of Protestant churches is to be attributed to their organization, their financial resources and methods of propaganda, the conversion of a number of Catholics to Protestantism, and the fact that the Aglipayans, who were Roman Catholics in 1903, rallied around a church of their own. The coming into being of the Aglipayan church to a certain extent was greater still than that of the Protestants.

There was a certain rivalry favorable to the masses between these various denominations. The non-Catholic churches translated their constitutions and religious books, among them the Bible, into various vernacular tongues and distributed them free of charge or at a very low price. Such was the degree of progress attained that it was possible for them to conduct religious services using Spanish and the native tongues. This brought about religious discussions the outcome of which was, for the followers of the different creeds, the public acceptance of religious tolerance.

IX. PAUPERISM.

Although, as a result of the war, the prices of the staple commodities have soared high, yet, inasmuch as the wages and the cost of food staples increased proportionately, the same conditions of pauperism prevailed in 1918 as in 1903. Tables 14 and 15 gave a total of 6,436 beggars maintained, *unable* to earn their living, or a total of 14,090, as against 1,668 recorded in 1902. For the city of Manila, the total was 138 in 1918, as against 375 in 1903.

Pauperism continues to be unknown in the Islands. The opinion of the Census Inspectors is unanimous as to this point. Moreover, taking into account that the number of beggars *able* to earn their living (7,654) is greater than that of those unable to do so, pauperism might be considered as eliminated, were it not for the excessive hospitality of the race, which makes every Filipino home an asylum and a charitable institution, and causes many idlers to become professional beggars.

X. WAGES.

The average daily wages for the most common occupations in the Philippines are, according to Table 16, as follows:

Blacksmiths	P1.63
Carpenters	1.47
Female-embroiderers	1.11
Masons and bricklayers.....	1.50
Silver and goldsmiths.....	1.79
Shoemakers	1.48
Chauffeurs	1.60
Drivers	.93
Engravers	1.83
Foremen	1.56
Sawyers	1.70
Painters	1.56
Mechanics	2.58
Collectors of palm juice.....	1.08
Cigar and cigarette makers.....	1.10
Barbers	.97
Nipa weavers	2.00
Tailors	1.77
Washermen	1.03
Nipa roofers	.79
Diggers	1.25
Musicians	1.60
Calkers	2.05
Lumbermen	1.27
Sowers	.62
Printers	1.81
Soap makers	1.90
Plumbers	1.38
Bakers	1.01
Butchers	1.03
Cart-drivers	1.36
Sinamay weavers	.42
Grass dealers	.87
Agricultural laborers	.65
Cotton weavers	.90
Sculptors	1.79
Miners	.60
Hatters	1.52
Horseshoe-makers	1.53
Negative retouchers	1.62

Saddle, belt and harness-makers.....	1.05
Slipper-makers	1.71
Tinsmiths	1.73
Seamstresses	.82
Abacá strippers	1.63
Cooks	.71
Fishermen	1.45
Watch repairers	1.75
Marble workers	1.63
Unclassified laborers	.79

The extremes of high and low wages in some provinces are influenced by the primitive methods employed in farming, the rivalry between the workers of a locality, the scarcity of laborers, and if not by these causes, by the fact that they are immigrants from other islands or provinces. Unskilled workmen or laborers are more important in the provinces, for they are useful, as the Spanish proverb puts it, "either for sweeping or scrubbing," without excluding the tilling of the soil. Farm laborers are commonly paid in food stuffs or get a certain share of the crop. Where there are plenty of factories, as in Manila, unskilled laborers and workmen are of little importance, as industrial and commercial workers are more vitally needed.

The following table is a brief résumé of the wages of the farm, industrial, and commercial workmen in the years 1903, 1911, 1917, and 1918:

Daily wages.

	1903	1911	1917	1918
Farm laborers.....	P0.55	P0.64	P0.67	P0.65
Industrial and commercial workmen	.73	.88	1.28	1.98

The working men in the Philippines are well protected. There is a Bureau of Labor which sees to the enforcement of all legislation relative to labor and capital, such as the laws for the protection of those who make honest efforts to secure the material, social, intellectual, and moral advancement of the laboring man, for the establishment of trade organizations and agencies, for the punishment of usury, the granting of homesteads, and the creation of rural credits, etc. The results has been that the labor unions are becoming more or less decisive factors in elections and political deliberations, some of their members having even been appointed directors and assistant directors of Government Bureaus.

The importance of labor is, therefore, duly recognized. As early as in the time of Pinpin (1610), the islanders showed more

ability in manual labor than the Chinese, who have monopolized all trade and business. As to agricultural work, the capacity of the native is greater and has become traditional. With the agricultural methods in vogue in the Philippines, they undergo hardships which would be unbearable to others in the fields, where they earn their daily bread amidst storm or under the pitiless rays of a sun which roasts the grain, the climate being so trying that Chinese and other orientals soon had to abandon agricultural work in this country and engage instead in horticulture, industry, and wholesale and retail trade.

The Census of 1903 noted that the Filipino workmen were more reliable than the Chinese, and were more desirable than any other class of workmen in any kind of work on the water and at a daily wage. Major-General McArthur, one of the military governors, gave the information that bogus tidings against them originated exclusively with Europeans who, being mere and simple exploiters, had no other interest in the Islands than the immediate acquisition of great profits. The Filipino laborer was, however, criticized for not being very efficient in "piece work," and it was affirmed that his efficiency was due to the control of him by Europeans. This cannot, however, be asserted at present, because since the filipinization of the public service, unquestionable skill has been evidenced by the Filipino workmen and by the present owners of vast agricultural lands and the experts and capitalists of certain prosperous enterprises who have risen from their ranks.

Labor has now assumed a position almost equal to that of capital, and in some instances higher than that of the capital, which has somewhat declined, and if this unbalanced condition continues, the results will be, according to some, a falling-off in the quality of the product of the work or of labor itself, and that which, as the popular saying goes, was *bueno*, *bonito*, and *barato* (good, pretty, and cheap), would become *scarce*, *dear*, and *bad*, and little by little our modern manufacturing industries would again become household industries and the final result would be economic ruin for the Legazpi's Archipelago. This fear is, however, a mere conjecture of the future. Judging from present indications, there is now comparative prosperity, greater probably than at any time in the past.

XI. REAL PROPERTY.

INCOME AND EXPENDITURES OF THE PROVINCIAL GOVERNMENTS.

Information about crops may be found in the chapter on agriculture. The section on real property has been omitted both in the table and in the present report, because the data on it shown by the Census of 1903 are very inaccurate, and the present Census has been unable to gather complete data on it.

Table 17 shows not only the value of real property subject to, but also of those which are exempt from, taxation. The table also gives the revenues collected in 1918 from taxable real property. The total assessed value of real property is ₱928,537,400. The value of the real property subject to taxation is ₱755,028,060, and of that exempt therefrom, ₱173,509,340. Table 18 gives the revenue collections and expenditures of the different provincial governments. The revenues collected amounted to ₱9,987,488.45 and the expenditures to ₱10,158,262.19. The excess of expenditures over the income is ₱170,773.74. This income represents only what is derived from real property tax, cedula tax, interests on loans and deposits, penalties and dues, etc., and the revenues from the telegraphs, telephones, launches and vessels, provincial hospitals, public lands, schools of arts and trades, etc. The income pertaining to the central government of Mindanao and Sulu and the city of Manila is not included therein. It may be seen in Table 18, that there are 31 provinces which can maintain their own government with their income from taxation and other revenues, and there are 18 which can not. The following provinces are self-supporting: Abra, Albay, Ambos Camarines, Antique, Batangas, Bohol, Bulacan, Cagayan, Capiz, Catanduanes, Cavite, Cebu, Ilocos Norte, Ilocos Sur, Iloilo, Isabela, Laguna, La Union, Masbate, Misamis, Nueva Ecija, Occidental Negros, Oriental Negros, Pampanga, Pangasinan, Romblon, Samar, Sorsogon, Surigao, Tarlac, and Tayabas. Those that are not self-supporting follow: Agusan, Bataan, Batanes, Bukidnon, Cotabato, Davao, Lanao, Leyte, Marinduque, Mindoro, Mountain Province, Nueva Vizcaya, Palawan, Rizal, Siquijor, Sulu, Zambales, and Zamboanga. The insufficient funds of these provinces are mainly due to the facts that most of them have been but recently created as provinces, that many improvements have been made in them, and that the regular sources of revenue are not as yet well established. With these attendant circumstances, it is necessary that all the provinces, the provinces which can maintain themselves not

excepted, should raise their taxes approximately 1.7 per cent to meet their necessary expenses.

This proposed 1.7 per cent increase in taxes, however, in all the provinces will not be necessary but at the most a very small fraction in the future, because as these provinces have already been improved permanently, certain costly expenditures will be needless, except those for the maintenance of the improvements, which these provinces will be able to pay, particularly if the exempted property valued at ₱173,509,340 be taxed, as it will give a revenue of ₱923,252.78, a sum five times greater than the deficit, which amounted to ₱170,773.74. The property exempted from taxation consists of the Friar Lands, San Lazaro Estate, and churches, convents, schools, hospitals, etc., belonging to religious entities of all denominations. The property of the religious entities alone is worth approximately ₱150,000,000.

The consolidated income and expenditures of all forms of governments in the Philippine Islands (the Insular, the provincial, including the Department of Mindanao and Sulu, and the municipal governments), may be seen in Table 19. The total amount of income is ₱98,387,749.27, and the expenditures amount to ₱91,830,064.01. Therefore, there is a total surplus of ₱6,557,685.26.

It is next to impossible to make a comparison between the Census of 1903 and the Census of 1918 in this regard, as the basis of classification of the former census is different from that of the latter. In the Census of 1903, not only were real and personal property mixed together, but the specification of taxable matter and the collection of taxes differ from those of the present Census, because the Census of 1903 is based merely on estimates made by Census agents and property owners more or less interested in misrepresenting the facts, and the Census of 1918 is based on the actual levy and collection of revenues.

The original data on the subjects we have just briefly analyzed, are contained in Schedule 5, *Social Statistics*. They also form the subject of the corresponding schedule of the 1903 Census, from which they were taken bodily and added to the study of the causes of the realization of the progress, retrogression or deviation attained in the lapse of the preceding fifteen years. Information about *free dispensaries, centers for the care of children, charitable institutions, agricultural credit associations, clubs, and civic associations*, is given herein. Furthermore, the subjects appearing on Schedule 5 differ widely from those given in the corresponding table of the Census of 1903 with respect to essential details.

TABLE NO. 9.—*Diseases of most common occurrence in hospitals and sanatoriums, by provinces and subprovinces.*

- ALBAY: Influenza, dysentery, tuberculosis of the lungs, typhoid fever, diarrhœa and enteritis, bronchitis (acute and chronic), infantile beriberi.
- AMBOS CAMARINES:¹ Malaria, influenza, tuberculosis of the lungs, acute articular rheumatism, salpingitis and other diseases of the female genital organs.
- BATAAN: Malaria, influenza, smallpox, convulsions of infants.
- BOHOL: Influenza, smallpox, dysentery, acute articular rheumatism, puerperal septicæmia, diseases of the skin and annexa, white swellings, whooping cough.
- BULACAN: Malaria, influenza, smallpox, beriberi, diseases of the skin and annexa.
- CAGAYAN: Malaria, dysentery, typhoid fever.
- CAPIZ: Tuberculosis of the lungs, bronchitis (acute and chronic), diseases of the skin and annexa.
- CEBU: Influenza, smallpox, beriberi, typhoid fever, diarrhœa and enteritis, bronchitis (acute and chronic).
- COTABATO: Malaria, influenza, dysentery, acute articular rheumatism, diarrhœa and enteritis, bronchitis (acute and chronic), diseases of the skin and annexa.
- DAVAO: Malaria, influenza, beriberi, dysentery, diseases of the skin and annexa, tuberculosis of other organs.
- ILOILO: Malaria, dysentery, tuberculosis of the lungs, diarrhœa and enteritis, convulsions of infants, intestinal parasites.
- ILOCOS NORTE: Malaria, diseases of the skin and annexa.
- ILOCOS SUR: Influenza, dysentery, tuberculosis of the lungs.
- ISABELA: Malaria, influenza, tuberculosis of the lungs, typhoid fever, infantile beriberi.
- LAGUNA: Malaria, influenza, smallpox, beriberi, dysentery, intestinal parasites.
- LANAO: Malaria, smallpox, beriberi, dysentery, typhoid fever, bronchitis (acute and chronic), diseases of the skin and annexa, intestinal parasites.
- LEYTE: Influenza, beriberi, tuberculosis of the lungs, diarrhœa and enteritis, bronchitis (acute and chronic) puerperal septicæmia, convulsions of infants, diseases of the skin and annexa, tumors (all forms).
- MANILA (city): Malaria, influenza, smallpox, beriberi, dysentery, tuberculosis of the lungs, puerperal septicæmia, organic diseases of the heart, pneumonia, intestinal parasites, venereal diseases, labor (normal).
- MINDORO: Malaria, influenza, beriberi, tuberculosis of the lungs, typhoid fever, diarrhœa and enteritis, pneumonia, diseases of the skin and annexa, cancer (all forms), bronchitis (acute and chronic).
- MISAMIS: Asiatic cholera, malaria, influenza, smallpox, beriberi, dysentery, tuberculosis of the lungs, typhoid fever, puerperal septicæmia.

¹ An Act was passed by the Philippine Legislature, March, 1919, authorizing the Governor-General to separate this province into the Provinces of Camarines Norte and Camarines Sur.

TABLE NO. 9.—*Diseases of most common occurrence in hospitals and sanatoriums, by provinces and subprovinces—Continued.*

MOUNTAIN PROVINCE:

BENGUET: Influenza, tuberculosis of the lungs, diarrhoea and enteritis, pneumonia, diseases of the skin and annexe.

BONTOC: Malaria, influenza, surgical cases, anæmia, chlorosis.

LEPANTO-AMBURAYAN: Malaria, influenza, dysentery.

NUEVA ECIJA: Malaria, tuberculosis of the lungs.

NUEVA VIZCAYA: Malaria, bronchitis (acute and chronic).

OCCIDENTAL NEGROS: Malaria, dysentery, tuberculosis of the lungs, puerperal septicæmia, convulsions of infants, diseases of the skin and annexe, intestinal parasites.

ORIENTAL NEGROS: Influenza, diseases of the skin and annexe, trachoma.

PALAWAN: Malaria, dysentery, tuberculosis of the lungs, typhoid fever, puerperal septicæmia, diseases of the skin and annexe, leprosy.

PANGASINAN: Malaria, influenza, appendicitis and typhlitis, puerperal septicæmia, cancer (all forms), tetanus, calculi of the urinary passages, anthrax.

RIZAL: Influenza, dysentery, tuberculosis of the lungs, diarrhoea and enteritis, bronchitis (acute and chronic), diseases of the skin and annexe, whooping cough, anæmia, chlorosis, neuralgia and neuritis

SAMAR: Influenza, typhoid fever, venereal diseases.

SORSOGON: Influenza, tuberculosis of the lungs.

SULU: Malaria, diseases of the skin and annexe, intestinal parasites.

TAYABAS: Malaria, bronchitis (acute and chronic), venereal diseases, other diseases of the uterus.

ZAMBOANGA: Malaria, influenza, beriberi, diarrhoea and enteritis, diseases of the skin and annexe, intestinal parasites, poisoning by food.

JUDICIAL STATISTICS.

JUDICIAL STATISTICS.

By IGNACIO VILLAMOR, *Director of the Census.*

Schedule—Cases Filed and Persons Accused—Classification of the Most Common Crimes—Proportion of Accused—Influence of Sex—Influence of Education—Influence of Marital Condition—Influence of Age—Recidivism—Juvenile Delinquents—Sentences—Insular and Provincial Prisoners—Bilibid Prison—Prison of Corregidor and Provincial Jails—Penal Colony of San Ramon (Zamboanga)—Penal Colony of Iwahig (Palawan).

For the collection of data concerning the criminal cases filed in the courts of justice in 1918, the persons accused, and the several kinds of crimes committed, the schedule used by the Bureau of Justice from 1907 to 1913 was adopted, with slight modifications. This special schedule of the Census contains, as may be seen in the following, 11 groups of crimes penalized by the Penal Code and by Acts of the Philippine Commission or the Philippine Legislature:

CRIMES.

Against the state:	Falsification and forgery—Continued.
Treason.	Falsification of public documents.
Rebellion.	Falsification of private documents.
Sedition.	Falsification of passports, cedulas, and certificates.
Insurrection.	False testimony and malicious prosecution.
Conspiracy.	Perjury.
Violation of oath of allegiance.	Unlawful use of the cedula.
Against public order:	Use of false documents.
Illegal use of firearms.	Against reputation:
Assault and violence against public officers.	Calumny.
Disobedience of, slander and threats against public authorities.	Slander.
Public disturbance.	Libel.
Violation of Act No. 1755.	Against persons:
Vagrancy.	Parricide.
Falsification and forgery:	Murder.
Falsification of seals and marks, money, bank-notes, etc.	Homicide.

CRIMES—continued.

Against persons—Continued.

Infanticide.
 Abortion.
 Physical injuries.
 Discharge of firearms.
 Boxing exhibitions.

Against property:

Robbery.
 Theft.
 Swindling.
 Usurpation.
 Brigandage.
 Arson.
 Damage to property.
 Unlawful fishing.
 Fraudulent use of trade-marks,
 etc.

Against public morals:

Adultery.
 Concubinage.
 Rape and unchaste practices.
 Abduction.
 Seduction and corruption of
 minors.
 Crimes of public scandal.

Committed by public officials in the
exercise of their duties:

Prevarication.
 Infidelity in the custody of
 prisoners.
 Infidelity in the custody of docu-
 ments.
 Usurpation of duties.
 Unchaste practices.
 Bribery.
 Frauds and illegal extortions.
 Embezzlement of public funds.
 Anticipation, prolongation, and
 abandonment of public duties.
 Illegal intervention in public
 contracts.

Against personal liberty and secur-
ity:

Unlawful detention.
 Abduction of minors.
 Abandonment and neglect of
 children.

Against personal liberty and secur-
ity—Continued.

Forcible entry of dwelling.
 Threats and coercion.
 Revelation of secrets.

Against public health:

Illegal interments.
 Violation of sepulchers.
 Violation of the Pure Food Law
 (1655).
 Use of fertilizers injurious to
 health (1526).
 Sale of intoxicating liquors.
 Unlawful practice of medicine,
 pharmacy, dentistry, etc.
 Violation of the Quarantine
 Law.

Miscellaneous crimes:

Fictitious representation of child-
 birth and usurpation of civil
 status.
 Illegal marriages.
 Reckless negligence.
 Display of flags, emblems, signs,
 etc., used during the Insurrec-
 tion.
 Crimes against the electoral
 franchise.
 Desertion of soldiers and ma-
 rines.
 Cruelty to animals.
 Exhibition of obscene matter.
 Violation of the Forest Law.
 Violation of the Road Law.
 Violation of the Internal Rev-
 enue Law.
 Violation of the Opium Law.
 Violation of the Immigration
 Law.
 Violation of the Law of Weights
 and Measures.
 Violation of the Customs Law.
 Violation of the Gambling Law.
 Sale and possession of lottery
 tickets.
 Violation of the Election Law.

CRIMES—continued.

Miscellaneous crimes—Continued.

Violation of the Acts of the
United States Congress.

Violation of Act on contracts of
personal service.

Violation of the Act on purchase
and sale of military equip-
ments (Act No. 2567).

Miscellaneous crimes—Continued.

Unlawful sale and possession
of explosives.

Violation of Large Cattle Act.

Violation of Usury Act.

Violation of the Administrative
Code.

In relation with the crimes specified in the eleven groups above mentioned, information was collected on the following points:

CASES.

Filed during the fiscal year.

Dismissed.

Decided.

Pending on December 31, 1918.

Cases appealed.

PERSONS ACCUSED OF CRIMES.

Sex:

Male.

Female.

Conjugal condition:

Married.

Widowers or widows.

Single.

Age:

From 9 to 15 years.

From 15 to 20 years.

From 20 to 30 years.

From 30 to 40 years.

Over 40 years.

Instruction:

University education.

College education.

Public school education.

Private school education.

Illiterate.

Place:

In inhabited place.

In uninhabited place.

In state of intoxication.

Recidivism:

One time.

Two times.

Three times.

Four times.

Over four times.

Period of the commission of crimes:

January.

February.

March.

April.

May.

June.

July.

August.

September.

October.

November.

December.

Decision of the court:

Dismissal.

Acquittal.

Conviction.

Cases pending.

Sentence:

Fine only.

2 years imprisonment.

From 2 to 10 years.

From 11 to 20 years.

From 21 to 30 years.

Life imprisonment.

Death penalty.

Other sentences.

To answer the different questions, the proper schedules were distributed among the clerks of courts of first instance and justices of the peace, and for the revision of the archives of the Supreme Court, several employees of that office were appointed as special compilers, in accordance with the provisions of the Census Act. The schedules returned by these officials were properly compiled, and on this basis, 104 tables on judicial statistics have been prepared.

For the interpretation of the criminal statistics, we take as a base of comparison the last official data published in 1913 by the Bureau of Justice. We can not make a proper comparison with the figures on criminal statistics of the 1903 Census, for the reason that the table of the latter was based on a plan different from the one adopted in the present Census, in which the principal consideration was given to the necessity of furnishing legislators, moralists, criminologists, and statesmen with the information necessary for the study of crimes and criminals in their various aspects. For this purpose, the crimes, as may be seen in the statistical tables, are classified by provinces as well as by sex, nationality, age, occupation, etc., in order that it may be observed whether or not any of these circumstances have had any influence in the commission of crimes, and to make possible the adoption of the necessary measures of a legislative, administrative or purely social character, for the repression of crimes and the reformation of criminals.

If we carefully study the statistical figures for 1912 and 1918, we shall see that the number of cases filed, persons accused, and persons convicted, and the ratio of these numbers to every 100 persons accused and every 10,000 inhabitants, are as follows:

	1912	1918
Cases filed.....	8,769	8,969
Persons accused.....	12,057	15,537
Convicted.....	4,586	6,500
Convicted per 100 accused.....	38%	35.4%
Convicted per 10,000 inhabitants.....	5.9	5.8

These figures show that the numbers of criminal cases and persons accused are greater for 1918; but on the other hand, the ratio of persons convicted for every 100 accused and for every 10,000 inhabitants is somewhat smaller.

If we consider only the most common crimes against persons,

against property, and against chastity, the comparison of the data for these same years gives the following result:

	1912	1918
Accused of crimes against persons	2,071	2,028
Accused of crimes against property	3,610	4,090
Accused of crimes against chastity	1,327	1,121
Total	7,008	7,239

It will be seen in these three groups of crimes that so far as the crimes against persons and against chastity are concerned, the greater number pertains to 1912, while for crimes against property, the year 1918 shows a greater number, with a total increase of 13.3, than the year 1912.

Specifying the most common crimes of the three great groups mentioned above, and comparing the figures for the two years, we get the following data:

Crimes against persons.	1912	1918
Parricide	69	53
Murder	507	416
Homicide	381	458
Physical injuries	944	1,087
Total	1,901	2,014

It will be seen from this table that the number of persons accused of parricide and murder was greater in 1912 than in 1918; on the other hand, the latter year shows a greater number of persons accused of homicide and physical injuries, with a total increase of 16.6 over the former.

Classifying the most common crimes against property, we have the following:

Crimes against property.	1912	1918
Theft	1,526	1,767
Robbery	979	987
Estafa	639	801
Arson	133	106
Damage to property	289	335
Total	3,571	3,996

It will be noted that as regards the crime of arson, there was a greater number of accused in 1912; on the other hand, in 1918 there was a greater number of persons accused of robbery, theft, estafa, and damages, with a total increase of 13.3.

The value of the property robbed, stolen, obtained under false pretense, and misappropriated in the two years mentioned, appears in the following table:

	1912	1918
Robbed	P107,383.84	P171,536.74
Stolen	132,116.70	186,690.94
Obtained under false pretense	242,899.49	254,305.81
Misappropriated	27,516.68	53,578.06
Total	509,916.21	666,111.55

Regarding crimes against chastity, the statistics for 1912 and 1918 furnish the following data:

Crimes against chastity.	1912	1918
Adultery	445	452
Rape and unchaste practices	379	300
Abduction	215	185
Seduction and corruption of minors	187	60
Bigamy and public scandal	23	13
Total	1,249	1,010

It should be noted that in this table, unlike the former, the greater number pertains to 1912. In the crimes against persons, the increase is 5.9, and in the crimes against property, the total increase is 11.9, while in the crimes against chastity there is a decrease of 19.1, that is to say, the frequency of these crimes has diminished.

The ratios to every 10,000 inhabitants of the three chief groups of crimes and of each of the principal classes of crimes under each group are as follows:

Crimes against persons.	1912	1918
Parricide	0.1	0.1
Murder	0.7	0.4
Homicide	0.5	0.4
Personal injuries	1.2	1.1

Crimes against property.	1912	1918
Robbery	2.0	1.0
Theft	1.3	1.7
Estafa	0.8	0.8

Crimes against chastity.	1912	1918
Adultery	0.6	0.4
Rape	0.5	0.3
Abduction	0.3	0.2
Seduction	0.2	0.1

The above ratios show that in all cases, the case of theft excepted, the comparison discloses the greater number for the year 1912.

A classification of the persons accused by sex gives the following result:

Sex.	1912	Per cent.	1918	Per cent.
Males.....	10,877	91	14,194	91
Females.....	1,180	9	1,343	9
Total.....	12,057	100	15,537	100

The similarity of the ratios for the two years seem to indicate that the proportion of criminality between men and women has remained stationary.

Let us now see the conclusions to be drawn from the comparative tables of the delinquency of men and women in the most common crimes against persons, against property, and against chastity:

Sex.	Crimes against persons.							
	Parricide.		Murder.		Homicide.		Personal injuries.	
	1912	1918	1912	1918	1912	1918	1912	1918
Males.....	59	42	480	397	367	428	859	1,015
Females.....	10	11	27	19	14	30	85	72

Sex.	Crimes against property.					
	Robbery.		Theft.		Swindling.	
	1912	1918	1912	1918	1912	1918
Males.....	958	956	1,415	1,645	557	720
Females.....	21	31	111	122	82	81

Sex.	Crimes against chastity.							
	Adultery.		Rape.		Abduction.		Seduction.	
	1912	1918	1912	1918	1912	1918	1912	1918
Males.....	222	225	379	300	215	173	187	56
Females.....	223	227				7		4

The total number of the most common crimes committed in 1912 was 6,271; of these, 573 were committed by women. This gives a ratio for every hundred persons accused of 91 men and 9 women. On the other hand, the most common crimes com-

mitted in 1918 total 6,566, of which number 604 were committed by women, which gives a ratio per hundred accused of 91 men and 9 women. This seems to corroborate the fact that the ratio of delinquency between men and women has remained stationary. It should be noted, however, that men not only predominate in all crimes, but that there is a well-marked difference in the ratio, with the exception of the crime of adultery, which, because of its nature, shows almost the same figures for both sexes. In the crimes committed through aggressive impulses, judging from the data furnished by statistics of 1912 and 1918, man commits homicide almost to the same extent as he inflicts physical injuries, while in woman the crimes involving less violence predominate. In the crimes committed for the purpose of obtaining property, such as robbery, theft, and swindling, we observe the same phenomenon, that is, woman usually commits crimes involving less violence, and thus she swindles rather than steals; on the contrary, man commits those of a more violent character, and is oftener guilty of theft than of swindling.

As regards the influence of education on the commission of crimes, the statistics give the following data:

Accused.	1912	Per cent.	1918	Per cent.
Educated.....	5,109	42	5,981	38.4
Uneducated.....	6,369	53	6,968	44.8
Data unknown.....	579	5	2,588	16.8
Totals.....	12,057	100	15,537	100

As will be seen, the illiterates furnish the greater number. Let us examine the most common crimes committed by the educated and the uneducated among the accused:

Education.	Crimes against persons.							
	Parricide.		Murder.		Homicide.		Personal injuries.	
	1912	1918	1912	1918	1912	1918	1912	1918
Educated.....	22	14	151	99	120	138	404	447
Uneducated.....	47	34	331	305	216	289	495	520
Unknown.....		5	25	12	45	31	45	120

Education.	Crimes against property.					
	Robbery.		Theft.		Swindling.	
	1912	1918	1912	1918	1912	1918
Educated.....	388	297	618	447	365	386
Uneducated.....	557	538	830	974	237	247
Unknown.....	34	152	78	346	37	174

Education.	Crimes against chastity.							
	Adultery.		Rape.		Abduction.		Seduction.	
	1912.	1918	1912	1918	1912	1918	1912	1918
Educated	180	163	168	183	109	73	112	41
Uneducated	248	226	190	180	101	93	65	15
Unknown	17	63	21	87	5	19	10	4

Upon examining the preceding comparative tables for 1912 and 1918, we see that delinquency is greater among the illiterates. It should be noted that the illiterates predominate in crimes of violence, such as murder, robbery, and rape, while the educated predominate in crimes requiring skill, such as seduction and swindling. This seems to corroborate the conclusion arrived at by criminologists, that instruction transforms the crimes of a barbarous nature into crimes of a more civilized character.

As to whether or not the marital condition has anything to do with the commission of crimes, let us see the data furnished by statistics:

Marital condition.	1912	Per cent.	1918	Per cent.
Married	6,805	56	8,948	58
Single	3,571	30	3,169	20
Widowers or widows	762	6	880	6
Data unknown	919	8	2,540	16
Total	12,057	100	15,587	100

The above table shows that the married furnish the greatest proportion. We shall see whether the most common crimes committed justify the same conclusion:

Marital condition.	Crimes against persons.							
	Parricide.		Murder.		Homicide.		Personal injuries.	
	1912	1918	1912	1918	1912	1918	1912	1918
Married	43	30	282	275	192	266	509	674
Single	12	15	158	98	105	115	306	244
Widowers or widows	14	7	36	24	24	35	69	56
Unknown		1	31	19	50	42	60	113

Marital condition.	Crimes against property.					
	Robbery.		Theft.		Swindling.	
	1912	1918	1912	1918	1912	1918
Married	536	508	894	1,004	376	450
Single	298	301	462	357	182	111
Widowers or widows	77	41	89	68	33	42
Unknown	68	137	81	338	68	198

Marital condition.	Crimes against chastity.							
	Adultery.		Rape.		Abduction.		Seduction.	
	1912	1918	1912	1918	1912	1918	1912	1918
Married.....	310	291	143	120	51	59	43	16
Single.....	92	90	183	114	184	93	114	36
Widowers or widows.....	27	39	23	30	11	12	20	8
Unknown.....	16	32	30	36	19	21	10	6

The comparative tables of the two years also indicate that delinquency is more developed among the married than among the unmarried, in all common crimes against persons, against property and against chastity, with the exception of abduction and swindling. This is in conformity with the nature of things. The struggle for existence is felt more by man than by woman; and it is, therefore, not strange that married men who have a family to support are more liable to commit crimes than those who are not married.

Considering age in connection with the number of persons accused, we have the following data:

Groups of ages.	1912	Percentage of accused.	1918	Percentage of accused.
From 9 to 15 years.....	81	1	132	0.9
From 15 to 20 years.....	988	8	942	6.0
From 20 to 30 years.....	4,850	40	4,616	29.7
From 30 to 40 years.....	3,511	29	4,180	26.9
More than 40 years.....	1,673	14	3,184	20.5
Unknown ages.....	954	8	2,483	16.0
Total.....	12,057	100	15,537	100.0

The above figures indicate that the greatest delinquency is developed between the ages of 20 and 40, the most critical period of the struggle for life.

If we distribute the most common crimes against persons, against property and against chastity among the different ages given above, we obtain the following results:

Ages.	Crimes against persons.							
	Parricide.		Murder.		Homicide.		Personal injuries.	
	1912	1918	1912	1918	1912	1918	1912	1918
Less than 15 years.....		1	1	3	1	2	4	14
From 15 to 20 years.....	5	6	38	21	21	43	37	91
From 20 to 30 years.....	29	20	200	148	146	166	372	369
From 30 to 40 years.....	25	14	158	123	97	127	269	326
From 40 or more.....	10	11	84	113	56	96	144	200
Unknown.....		1	31	8	60	24	63	87

Ages.	Crimes against property.					
	Robbery.		Theft.		Swindling.	
	1912	1918	1912	1918	1912	1918
Less than 15 years.....	10	40	28	29	1	2
From 15 to 20 years.....	109	127	188	146	34	16
From 20 to 30 years.....	380	338	577	479	229	201
From 30 to 40 years.....	297	207	406	454	212	244
More than 40 years.....	107	146	251	325	98	145
Unknown.....	76	129	76	334	65	193

Ages.	Crimes against chastity.							
	Adultery.		Rape.		Abduction.		Seduction.	
	1912	1918	1912	1918	1912	1918	1912	1918
Less than 15 years.....			6	3				
From 15 to 20 years.....	36	28	54	27	50	27	25	8
From 20 to 30 years.....	233	189	175	121	107	99	97	34
From 30 to 40 years.....	124	133	53	72	28	32	43	11
More than 40 years.....	30	35	32	43	17	8	11	2
Unknown.....	22	67	29	34	13	19	10	6

A careful examination of the above figures discloses the fact that the greatest manifestation of criminality consists in the crime of theft. This is a corroboration of the sociological theory that the instinct of self-preservation is the principal cause which moves human nature. This force is represented by a longing for food and any desire which has for its object the mitigation of the sensation of hunger. The lack of food produces inaction and inaction leads to death. For this reason, every one looks on food as important and as a positive means for the preservation of life. Moreover, it is not sufficient to obtain food for the preservation of life; there is also need of self-defense against everything which may jeopardize existence, such as the inclemencies of the seasons, injurious animals, sickness, etc., and hence the need of clothing, shelter, and other means of defense. But, aside from all these, as people move on the path of progress, there is also an increase of wants and desires to make life more pleasant through the enjoyment of the new elements which civilization carries with it. The struggle has to be colossal because of the great number of those who take part in it and because of the different activities which are displayed in order to insure success. It is easy to see, therefore, why many, in the heat of competition, break the rules of conduct established for the protection and security of property, or betray that trust which is essential in fair dealing between man and man in order to stimulate confidence and foment the spirit of mutual co-operation. Taking one hundred accused persons in each group according to the various tendencies leading to the crimes against

persons, against property and against chastity, it will be noted that sexual appetite prevails in the third age, which proves that the age of virility is the stage of life when human passion breaks loose with the greatest violence.

The number of recidivists shown by the statistics is as follows:

Number of times.	1912	Per cent.	1918	Per cent.
Two times	151	1.2	183	1.2
Three times	47	0.4	58	0.4
Four times	27	0.2	44	0.3
More than four times	18	0.1	14	0.1
Total	243	1.9	299	1.9

From these figures, it appears that the number of persons guilty of a 2nd, 3rd and 4th offense has increased in 1918; on the other hand, the number of those who committed crimes oftener than four times has decreased.

As regards juvenile delinquency, we have the following data:

Minors confined in reformatories.

Sex.	1912	1918
Males	196	374
Females	23	44
Total	219	418

The above tables indicate that the percentage of juvenile delinquency is gradually increasing. Juvenile delinquency is manifested particularly in the infraction of municipal ordinances and sanitary regulations, and in vagrancy, theft, seduction, and swindling.

What have been the results of the criminal proceedings instituted in the courts of first instance during the years 1912 and 1918?

The statistics furnish the following data:

Accused.	1912	Per cent.	1918	Per cent.
Convicted	4,536	38	5,500	35.4
Acquitted	1,453	11	892	5.8
Liberated by dismissal	3,065	28	4,356	28.0
Accused in cases pending	3,003	17	4,789	30.8
Total	12,057	100	15,537	100.0

The sentences imposed may be classified as follows:

Sentence.	1912	Per cent.	1918	Per cent.
Fine only.....	1,238	27	2,588	47.1
To 2 years imprisonment.....	2,251	50	1,893	34.4
From 2 to 10 years imprisonment.....	595	13	512	9.1
From 11 to 20 years imprisonment.....	223	5	146	2.7
From 21 to 30 years imprisonment.....	1		14	0.3
Life imprisonment.....	61	1	32	0.6
Death penalty.....	33	1	15	0.3
Other penalties.....	139	3	300	5.5
Total.....	4,586	100	5,500	100.0

It should be noted that in 1912 the largest number of penalties imposed was imprisonment not exceeding 2 years, while in 1918 the greatest number of penalties consisted of fines. This is, perhaps, due to the fact that almost all new penal legislation provides for an alternative penalty of fine or imprisonment. We can see that the courts are more inclined to impose pecuniary penalties than imprisonment. Regarding the imposition of capital punishment, it should be noted that there was a greater number of persons accused and sentenced to capital punishment in 1912 than in 1918; in the former year, 33 were sentenced to capital punishment, which figure was reduced to 15 in 1918.

The delinquent population on Census Day, including persons awaiting trial or sentence, was composed of 6,386 prisoners, confined in Bilibid Prison, Corregidor Prison, Iwahig Penal Colony, San Ramon Penal Colony, and the provincial jails, according to the crimes committed, as shown in the following table:

Crimes.	Prisons.					Total.
	Bilibid.	Corregidor.	Iwahig.	San Ramon.	Provincial jails.	
Against persons:						
Parricide.....	74	34	32	11	15	166
Murder.....	386	123	261	143	151	1,064
Homicide.....	465	157	301	142	133	1,198
Personal injuries.....	57	14	3	1	53	128
Against property:						
Robbery.....	575	159	158	61	142	1,095
Theft.....	402	152	12	92	276	934
Swindling.....	81	10			70	161
Against chastity:						
Adultery.....	73	4	1	4	31	113
Rape.....	124	43	46	12	27	252
Abduction.....	54	23	55	6	9	152
Seduction and corruption of minors.....	7	1	1	1		10
Bigamy and public scandal.....	8	1				9
Other crimes.....	397	62	132	120	343	1,104
Total.....	2,703	788	1,052	593	1,250	6,386

If we deduct from the above figures the 602 persons awaiting trial or sentence in Bilibid and in the provincial jails, we see that on Census Day there were confined in the penal institutions 5,784 convicts, which number, compared with the total population, gives us 5.7 delinquents for every 10,000 inhabitants, while the Census of 1903 shows 8 persons for every 10,000 of population.

The most common crimes committed are against persons, followed, in the order of their frequency, by the crimes against property and against chastity.

In view of the general result of the analysis of criminal statistics, we necessarily arrive at the conclusion that the data furnished by the present census fully substantiate the opinion of the director of the 1903 Census, that the Filipino people, as a race, has no criminal propensity.

As regards the enforcement of the penalties imposed by the courts of justice, we may mention that the penitentiary system established in these Islands by the penal code, was changed into a correctional reformatory system by acts of the Philippine Commission and Legislature.

At the present time, persons convicted of crime serve their sentences in the provincial jails, in Bilibid, in the Corregidor Prison, in the Penal Colony of Iwahig or in the San Ramon Penal Colony. There is also a prison for Insular prisoners in Benguet, which is under Bilibid Prison.

BILIBID PRISON.

The system followed in Bilibid Prison differs from the strictly penitentiary system, inasmuch as the latest reforms have been adopted in order to secure the protection of society by the correction as well as the reformation of the criminals.

Prisoners are treated with humanity. They are divided into three classes, the first, second, and third, according to whether their conduct is exemplary, good, or bad. They are also classified by nationality and sex, and by legal status, according to the length of their sentences (short sentence, 3 years and 8 months, and long sentence, more than 3 years and 8 months). Each group has its own dormitory. These classifications are made for the purpose of avoiding the contagious influence of habitual criminals on their fellow prisoners. The juvenile delinquents in Manila are confined in the reformatory for boys or girls, as the case may be.

To maintain discipline among the prisoners, they are, on the one hand, encouraged by the promotion in class of those whose

conduct is exceptionally good, and, on the other, deterred by disciplinary punishment for violations of the regulations, insolence, disobedience, disrespect, disorderliness, untruthfulness, the use of profane and indecent language, or refusal to work. This punishment consists of reprimand; deprivation of visits; extra hard or disagreeable work; deprivation of meals, not to exceed one in one day for more than five consecutive days; close confinement, with or without irons, on half ration, not to exceed forty-eight hours at any one period, and not to be repeated until after forty-eight hours shall have elapsed; close confinement, with or without irons, on half ration, not to exceed fourteen consecutive days, and not to be repeated until after fourteen days shall have elapsed.

With a view to the education and reformation of the prisoners, these are taught in Bilibid Prison various trades (32 in all) by competent instructors. The prisoners are trained for their own good. They are taught blacksmithing, machine ironworking, carriage and wagon making in all its branches, silversmithing, wickerware furniture manufacturing, tailoring, carpentering, cabinetmaking, machine woodworking, painting, finishing and polishing furniture, timber testing, shoemaking, tinsmithing, soap manufacturing, buttonmaking, hammock manufacturing, baking, cooking, laundering, etc.

The moral education of the prisoners is not neglected. There are day and night schools in Bilibid Prison, under the direction of prisoners. There is a Catholic chaplain who attends to the religious needs of the prisoners, hearing confessions, preaching sermons, and giving lectures. There are also representatives of other religious denominations who voluntarily render services to the prisoners, according to their respective religious creeds. The prison has a library to which certain privileged prisoners have access. They have regular hours for rest (11.30 a. m. to 1 p. m.) and for recreation (5.30 to 8.45 p. m.). There is also a band, composed of prisoners, that gives concerts after the regular hours for work are over, and the prisoners are given cinematograph entertainments twice weekly, and lectures, etc.

For their correction, the prisoners are prohibited from communicating with any person; talking to visitors or giving or receiving anything from them, unless permitted by the warden or his deputies; talking with any officer or prison guard, unless permitted to do so in case of urgent necessity, and during the working hours only what is necessary to execute their work; talking aloud or making unnecessary noise of any kind; talking

or idling around while at work; speaking to prisoners distributing their rations, but complaints may be made, if any, to any prison officer or employee at any time; leaving the place to which they are assigned during working hours, except with the permission of their respective guards; receiving food from friends outside of the prison; sending correspondence outside of the prison, except through the office of the warden; keeping food in their possession after meal hours.

Furthermore, prisoners are required to observe strict obedience to the rules and regulations of the prison and to the orders of the officers and guards, and no excuse whatever is admitted for any disobedience; to devote their attention exclusively to their work; to keep quiet and silent in every way; to keep strict silence after "tattoo" (8.45 p. m.) and go to bed after "taps" (9 p. m.). Every able-bodied male prisoner serving a final sentence, except those over 60 years old, is required to work for seven and one half hours a day, and to work on the insular, provincial, and municipal public works or in any other part of the Islands by executive order of the Governor-General, except on Sundays and legal holidays.

Except during working hours, the prisoners are organized into squads composed of 24 prisoners, like soldiers in their barracks. At the head of each squad there is a foreman, who is a prisoner promoted to the highest class. Several squads form a section, commanded by a guard, and several sections make up a group, under the command of an overseer. Under this semi-military organization the prisoners become accustomed to self-control and discipline so that they can be easily controlled and governed.

CORREGIDOR PRISON AND PROVINCIAL JAILS.

It may be stated that the rules of discipline and means of correction and reform used in Bilibid Prison are enforced in Corregidor, with the exception of industrial work.

The Director of Prisons, with the approval of the Department Secretary, makes regulations for the internal administration of the provincial jails, which are enforced under the immediate supervision of the provincial jailer.

SAN RAMON PENAL COLONY.

San Ramon is a model penal colony. Its organization is different from that of Bilibid, inasmuch as the prisoners are distributed in various agricultural and industrial divisions of the colony outside of the prison walls and are only confined at night. Within the prison walls are various compartments, namely,

dormitory, dining-room, laundry, bakery, tailor and barber shops, administrative office, and sales office. Well-behaved and diligent prisoners are allowed to live in separate houses outside of the prison walls. The industrial activities of these prisoners consist in road-building, manufacture of copra, cattle and hog breeding, and poultry raising. The cattle and hog industries are well developed. The agricultural activities of the prisoners consist in planting coconuts, vegetables, fruits, and other plants, which are grown in abundance both for the use of the prisoners and for sale. It is reported that the number of coconut trees already planted in San Ramon is 80,000, of which 50,000 are bearing; the remainder are about 4 years old. The farms of the San Ramon Penal Colony have buildings for the superintendent and employees. There is also a school for colonists' children, this being the only instance in the world where civilians send their children to prison to get a preliminary education. The colony has well-constructed roads traversing it, the total length of which is about 15 kilometers.

The prisoners work regularly during the hours fixed by regulation. All work done is for the benefit of the farm. The prisoners are given such good food that their physical condition could, as a rule, not be improved upon. They are allowed to bathe every day and a sea bath is allowed them once a week. It is believed that when the plantation is completely developed, it will not only be self-supporting, but able to turn a surplus profit into the Insular Treasury.

IWAHIG PENAL COLONY.

Something must be said regarding the Iwahig Penal Colony. Here the prisoners, upon entering, cease to be "prisoners" and become "colonists." This institution is different from that of San Ramon since the colonists are allowed to live in complete liberty, with the exception of those who commit some offense and are punished with either imprisonment or arrest. The colonists are distributed in different barrios, and are allowed to live with their families. Each one of the barrios is administered by a barrio lieutenant, who is elected by the barrio residents. The election is held under the direction and supervision of the superintendent. Each barrio has its own board of jurors, composed of 15 members, all of whom must be colonists of the first class (petty officers, "capataces," and division chiefs). The president, the two assessors, and all the other members of this petty court are elected by the colonists of the first class from among themselves. The elections are subject to the approval or dis-

approval of the superintendent. The latter official exercises appellate jurisdiction over cases appealed from the jury and is clothed with authority for revision. He also examines the jury's proceedings and decisions. The cases arising among the colonists and any others which, in the opinion of the superintendent, had better be decided by the colonists themselves, are endorsed to the jury for judgment, by means of a memorandum order. The prosecuting officer of the jury is named directly by the superintendent, while the attorneys for the defense are elected or named by the accused himself from among the colonists of the third, second, or first class. The prosecutor and the attorney have almost the same duties and rights as those who appear in ordinary tribunals; in appealed cases they submit their briefs in writing to the superintendent. The punishments are inflicted in a manner redounding to the benefit of the colonists themselves, since instead of being confined, the colonist so convicted is made to break stones daily, unless his health does not permit of this. These stones are used in the construction of buildings and roads.

The work is distributed among eight divisions. Nearly one-half of the 1,052 colonists living in the colony are giving their time to agriculture. The engineering and machinery division has under its management the ice-plant and sawmill, the horse-shoeing department, the water and power plants, and the carpentry shop.

The agricultural products of the colony consist principally of coconuts, corn, rice, fruits, and vegetables. Mention should be made of the planting of coconuts, which is done on a large scale. About 67,000 coconut trees have already been planted; of these, more than one-half are bearing. As soon as all the coconut trees are bearing, the income of this plantation should amount to ₱200,000 yearly.

The production of the colony is composed of many agricultural products—the most important being livestock, copra, rice, sugar, vegetables, and tobacco. The fishery nets from ₱8,000 to ₱10,000 per annum, while the sawmill and forestry products are likewise important sources of revenue. Fruit trees, such as orange, mango, and bread fruit or nanka trees, are being cultivated; there is also a considerable area planted to banana trees.

The total area occupied by the colony is 160 square miles. Six hundred and fifty hectares are planted to coconuts, 110 hectares to rice, 60 hectares to sugar cane, and 130 hectares to corn and other crops. There are within the confines of the colony in all 950 hectares of cultivated land and 1,250 hectares of pasture.

The results of the method of penal colonization adopted in

the two institutions described are what could be expected. Encouraged by the desire of promotion from one class to another, in order to enjoy additional privileges, and knowing that their confinement in the colony is more beneficial and profitable for them than that in Bilibid Prison, the colonists are on their good behavior. Furthermore, those holding positions of trust may receive a monthly allowance in money, not to exceed ₱5, besides the percentage which, in the superintendent's discretion, is given them from the proceeds of the goods manufactured or otherwise produced in the colony. If they so desire, they are granted a suitable piece of land within the reservation which they may cultivate and improve, the Government furnishing them with such tools, implements, and agricultural supplies as they may need; they may also have their families with them, who are supported from the general products of the colony so long as the land cultivated by them does not yield enough for their support. In this way, order in the colony is not only secured without the help of force, but habits of industry are fostered among the colonists.

There can be no doubt but that the settlement of prisoners in colonies under the system adopted in these colonies is highly beneficial, both to the colonists and to the Government and society at large. It is beneficial to the colonists because nowhere else could there be so much moral uplift. The reputation and betterment of these prisoners are never lost sight of in these colonies, where they really acquire the habit of labor, the spirit of economy, and love for peace, all virtues which they must possess in order to live properly in society.

These penal colonies are beneficial both to the Government and to society. Firstly, their moral effect is such as to save the Government considerable expense for the maintenance and guarding of the prisoners, and, secondly, the labor of the colonists is utilized to the best possible advantage for society. If colonies like those of San Ramon and Iwahig were established in the northern, central, and southern parts of Luzon, the benefits to be derived from them would be distributed equally among all provinces. Such colonies, if properly managed, would in time become magnificent farms, the income of which would not only maintain the colonies themselves, but would be available for the construction of provincial roads, the increase of the salaries of the teachers, and the increase of the number of schools in the province concerned, and society would thus enjoy the blessings of education instead of suffering the harm caused by the commission of crimes.

MANUFACTURES.

MANUFACTURES.

Report submitted by EPIFANIO DE LOS SANTOS,
Assistant Director of the Census.

I. THE SCHEDULE.

The schedule used in the collection of the data indicated in the column headings is inserted below. The word "manufacture" covers any article or product obtained through mechanical process, whether the motive power used be steam, water, hand, or animal power. The information is confined to manufacturing establishments which produced in 1918 manufactured goods worth ₱1,000 or over. The required information was requested from the presidents of the municipal census boards, on account of their prestige and their familiarity with local business conditions. Additional data and necessary comments have been obtained from the Census inspectors. The private but reliable data given by manufacturers have been utilized for supplementing and completing the above-mentioned information.

NOTE.—Year refers to fiscal year of business. (NOTA.—El año se refiere al año fiscal del negocio.)

II. MANUFACTURES.

At the time when the Census was taken there were 5,239 factories and industrial establishments throughout the Archipelago, besides the sugar and rice mills. The total capital invested amounted to ₱164,745,868.27; the cost of production was ₱188,943,637.17; the average monthly number of workers was 70,329, the total average monthly salaries, ₱2,195,183.06, and the total value of production, ₱230,485,666.11 (Tables 1, 2, 5, and 6), showing a profit of 25 per cent. These data do not include the sugar mills, totalling 2,663, with a capital of ₱52,407,514.09; a cost of production of ₱21,837,596.71; an average monthly number of workers of 70,722; average monthly salaries totalling ₱1,406,800.63, and an aggregate production valued at ₱82,145,961.59, which shows a profit of 115 per cent, nor the rice mills, numbering 452, with a capital of ₱5,320,209.37; a cost of production of ₱3,396,437.84, not including the value of the principal raw material, unhulled rice; a monthly average number of workers of 2,414; a monthly average total of salaries of ₱68,895.40, and an aggregate production valued at ₱43,462,805.46 (Table 30).

There was, therefore, in the Islands, at the time when the Census of 1918 was taken, a total of 8,354 manufacturing establishments, with an aggregate capital of ₱222,473,591.73 in money and real and personal property; a cost of production of ₱214,177,671.72; an average monthly number of laborers of both sexes of 143,465; a monthly average total of salaries of ₱3,670,879.09; and a total production valued at ₱356,094,433.16.

A comparison of these grand totals with those of the Census of 1903 shows the following items in favor of the Census of 1918: the number of manufacturing establishments was 5,095, representing an increase of 156 per cent; the capital invested, ₱169,314,011.73, an increase of 319 per cent; the cost and value of production were ₱189,128,219.72, and ₱314,394,218.16, respectively, showing an increase of 755 and 754 per cent, respectively; the average monthly number of laborers was 63,559, an increase of 80 per cent, and the average monthly salaries totaled ₱2,524,221.09, an increase of 220 per cent.

These percentages are not, however, very encouraging, as it will be noticed that the abaca pressing establishments, of which there were 83, and the cost of production of the sugar mills, as well as the salaries, wages, and other expenses of all other industries, were not included in the Census of 1903. Moreover, the recorded cost of materials in 1903 was the cost of materials *purchased*, not the cost of materials *used*.

Comparative table of manufacturing establishments and industries existing in the Philippine Islands.

Year.	Number of establishments.	Capital.	Cost of production.
		<i>Pesos.</i>	<i>Pesos.</i>
1903 ^a	3,259	53,159,580.00	^b 25,049,452.00
1918	8,354	222,473,591.73	214,177,671.72
Differences	5,095	169,314,011.73	189,128,219.72
Percentage of increase	156	319	755

Year.	Monthly average of laborers.	Monthly average of salaries.	Total value of production.
		<i>Pesos.</i>	<i>Pesos.</i>
1903 ^a	79,906	1,146,658.00	41,700,215.00
1918	143,465	3,670,879.09	356,094,433.16
Differences	63,559	2,524,221.09	314,394,218.16
Percentage of increase	80	220	754

^a Abaca presses not included for lack of data.

^b The cost of production of sugar mills, and the salaries, wages, and other expenditures of all other industries are not given.

The following is an enumeration of the various factories and principal industries, in the order of their importance, number of establishments, capital invested, cost of production, monthly average number of laborers, monthly average salaries, and total value of output (Tables 5 and 6).

(a) NUMBER OF ESTABLISHMENTS.

The following are industrial and manufacturing establishments, with 100 or more in their class:

Bakeries and cake factories.

Tailor shops.

Copra drying industry.

Salt industry.

Native confectioneries.

Shrimp and fish drying and salting industries.

Slipper shops.

Oil factories.

Gold and silversmith, watch repairing, jewelry, and optical shops.

Carriage factories.

Blacksmith shops.

Shoemaking shops.

Embroidery shops.

Distilleries.

(b) CAPITAL INVESTED.

The following are industrial and manufacturing establishments having a capital of ₱1,000,000 or over:

Oil factories.	Embroidery shops.
Gas and electric light and power plants.	Lithography, printing, and bookbinding shops.
Cigar and cigarette factories.	Bakeries and cake factories.
Distilleries.	Salt industry.
Sawmills.	Gold mining industry.
Boat building.	Shoemaking shops.
Abaca pressing industry.	Gold and silversmith, watch repairing, jewelry, and optical shops.
Ice plants.	Hat and umbrella factories.
Coal industry.	
Iron foundries and machine shops.	

(c) COST OF PRODUCTION.

Industrial establishments with a cost of production of ₱1,000,000 or over:

Oil factories.	Iron foundries and machine shops.
Abaca pressing industry.	Embroidery shops.
Cigar and cigarette factories.	Boat building.
Distilleries.	Rope factories.
Sawmills.	Shoemaking shops.
Bakeries and cake factories.	Slipper shops.
Gas and electric light and power plants.	Shrimp and fish drying and salting industries.
Lithography, printing, and bookbinding shops.	Furniture and cabinet-making shops.
Tailor shops.	Hat and umbrella factories.
Soap factories.	Carpentry shops.
	Copra drying industry.

(d) AVERAGE NUMBER OF LABORERS.

Establishments having an average monthly number of laborers of 1,000 or more:

Cigar and cigarette factories.	Salt industry.
Saw mills.	Lithography, printing, and bookbinding shops.
Oil factories.	Distilleries.
Bakeries and cake factories.	Coal industry.
Tailor shops.	Boat building.
Embroidery shops.	Slipper shops.
Gas and electric light and power plants.	Iron foundries and machine shops.
Copra drying industry.	Abaca pressing industry.
Gold mining industry.	Shoemaking shops.

(e) TOTAL AVERAGE MONTHLY SALARIES.

The following are manufacturing establishments paying an average monthly total of salaries and wages of ₱20,000 or over:

Cigar and cigarette factories.	Gold mining industry.
Oil factories.	Embroidery shops.
Sawmills.	Copra drying industry.
Gas and electric light and power plants.	Iron foundries and machine shops.
Lithography, printing, and book-binding shops.	Slipper shops.
Tailor shops.	Abaca pressing industry.
Bakeries and cake factories.	Shoemaking shops.
Boat building.	Furniture and cabinet-making shops.
Distilleries.	Various repair shops.
Salt industry.	Gold and silversmith, watch repairing, jewelry, and optical shops.
	Carriage factories.

(f) TOTAL VALUE OF PRODUCTION.

Industries with an output valued at ₱1,000,000 or over are the following:

Oil factories.	Rope factories.
Abaca pressing industry.	Slipper shops.
Cigar and cigarette factories.	Furniture and cabinet-making shops.
Sawmills.	Shrimp and fish drying and salting industry.
Distilleries.	Hat and umbrella factories.
Bakeries and cake factories.	Copra drying industry.
Gas and electric light and power plants.	Carpentry shops.
Lithography, printing, and bookbinding shops.	Gaseous and mineral water factories.
Tailor shops.	Native confectioneries.
Iron foundries and machine shops.	Ice plants.
Soap factories.	Macaroni, spaghetti, and vermicelli factories.
Boat building.	Gold and silversmith, watch repairing, jewelry, and optical shops.
Embroidery shops.	Tanneries.
Shoemaking shops.	

With reference to location, thirteen provinces, including the city of Manila, have each 100 or more establishments, viz: Manila, Laguna, Tayabas, Rizal, Cebu, Cavite, Bulacan, Iloilo, Samar, Pampanga, Ilocos Sur, Batangas, and Pangasinan. The two latter provinces have each 119 establishments. With reference to value of production, fifteen provinces, including Manila, have each a production valued at ₱1,000,000 or over, namely: Manila, Leyte, Cebu, Sorsogon, Rizal, Iloilo, Laguna, Bulacan, Occidental Negros, Bataan, Ambos Camarines, Tayabas, Pangasinan, Catanduanes, and Pampanga (Table 1). Manila leads all the provinces, both in the number of establishments and the value of the total production. Cavite followed Manila in 1902, on account of the production of its three shipyards, but in 1918,

15 other provinces were ahead of it, as it only occupied the seventeenth place, its production amounting to ₱811,081.17 (Table 1). Manila, Cavite, Bulacan, and Pangasinan were, in 1902, the only four provinces having a production of ₱1,000,000 or over.

It will be seen from Table 5 that the industrial and manufacturing establishments of which the largest number is recorded, are the following: Bakeries and cake factories, 633; tailor shops, 583; copra drying industry, 349; salt industry, 254; native confectioneries, 244; shrimp and fish drying and salting industries, 208; slipper shops, 198; oil factories, 181; gold and silversmith, watch repairing, jewelry, and optical shops, 180; carriage factories, 159; blacksmith shops, 141; shoemaking shops, 138; embroidery shops, 115; and distilleries, 101. The geographical distribution of these industries (Tables 7, 8, 9, 10, 11, and 12) is almost uniform. The percentage of luxuries is small, inasmuch as smoking and chewing tobacco and liquors and beverages, which, in 1902, furnished 38.5 per cent of the total production, furnished in 1918 only 19.8, 2.6, and 0.6 per cent each, respectively (Table 25), that is, a total of 23 per cent of the total production. The number and value of the exports increased remarkably during this period, as shown by the following résumé of the exports in 1902 and 1918.

Exports.

Articles.	Quantity.		Value.		Percentage of in-crease (+) or decrease (—).	Percentage of the total value of exports.

b Less than one hundredth of 1 per cent.

c The quantity of coconuts not specified.

d Includes the value of copra and coconuts.

e The value of other dyeing products not included.

f The quantity of elaborated tobacco is not specified.

In 1902 and previous years, native hats and fabrics were the articles most preferred by foreigners and are cited as the only articles manufactured in this country, of which records are kept in the Bureau of Customs in regard both to the amount exported and to the value thereof. In 1902, however, the amount of exported textiles was so negligible that no record was kept of their quantity, while in 1918, the total value of exported native embroideries was ₱4,361,352. As to native hats, the export value in 1902 was only ₱321,780, while in 1918 it amounted to ₱1,183,446, which represents an increase of 267.8 per cent. Some of the imports of 1918 were still more or less agricultural products in commercial forms. But, aside from the fact that there is no ground for a comparison in regard to the variety of the exported articles, certain principal agricultural commodities had become regular industrial and manufactured articles in 1918, such as, for example, the coconut oil and the sugar, which increased 9,151,390.9 and 372.8 per cent, respectively, without, however, representing even one-half of the percentage of the total export value, because coconut oil represents only 23.42 per cent, and sugar 11.69 per cent, of that value.

Table 16 contains a comparison between the manufactures in 1902 and 1918, and gives, by provinces and subprovinces, the total number of establishments, capital, average monthly number of workers, average laborers' wages, and cost and value of production. However, the value of the material purchased for the year 1902 and following years is included in the figures showing the cost of production of manufactured articles in that year, while in 1918 the figures showing the cost of production cover only the material used, that is, only the raw material actually used in 1918, without any reference to the material kept on hand to be used during the following months or years. For the purpose of making a comparison between the different kinds of factories, the following comparative table has been prepared, in which Tables 5 and 6 are combined with similar tables and statistics of the 1903 Census, and the manufacturing establishments are compared, with the nomenclatures of both censuses.

Comparative table showing number of establishments, capital invested, average of monthly salaries, and value of production, from 1903 to 1918, by kinds of industry.

Industry.	Number of establishments.		Money and real property invested in the business.		Total average monthly wages.		Total value of production.

There cannot be any doubt as to the evolution and progress of the manufactures in the last fifteen years. Moreover, the mere household industries which, in the Census of 1903, the inspectors, then the provincial governors, had considered it desirable to report as manufactures, viz: the "cordage works, paper factories, furniture factories, soap factories, glassware and pottery factories, hat factories, shoe factories, brick-kilns, sawmills, canneries, and cigar and cigarette factories in the tobacco-growing regions," were in 1918 real and successful factories, in addition to plenty of manufacturing industries having new organizations and names.

It is true that there are but few establishments in some of these classes; for instance, there is only 1 glassware factory, included in the section of *Other Industries*; there are but 16 chinaware and earthenware factories under the title of brick and tile factories; 4 canneries; 3 rope factories, and 78 soap factories. A paper factory still remains to be established, but the preliminary steps for the establishment of one have already been taken and adequate legislation has been adopted, for the reason that this country offers a promising field to this industry on account of the abundance of raw materials in the Islands, for example, in Bataan Province, in the vicinity of Manila, and in many other places where there is an abundant supply of the bamboo species commonly known as *caña-bojo*, of the waste of maguey and abaca, the reed-grasses known as *kogon*, and *talahib*, the coconut coir or *bonote*, the leaves of the nipa, areca and buri palms, the refuse of rattan, and *lawan*, *kupang* and other soft timber, which grow wild anywhere.

On the other hand, besides the abaca and tobacco industries, the products of which are exported, the sugar and oil manufacturing industries are developing very fast and are ready to meet any competition. The oil value of the seeds of the *lumbang*, *kāpok*, *kasoy*, *tañgan-tañgan*, cotton-tree, *tuba*, *pili*, *kalumpang*, and *cato* is already known. The plants yielding fibers, lumber, gums, resins, dye-stuff, and tanning material are also being exploited. A leather not dissimilar to the imported quality has fortunately been discovered; it is free from the characteristic bad odor of the leather tanned by the old method, an odor nauseating to the customers. Coal, asbestos, gold, and sulphur mines, and oil wells are being operated on a big industrial scale; artesian water, gravel for the roads, and clay for pottery are taken from the ground; iron deposits are being worked, and articles made of lime, mixed lime and sand,

cement (*pipes, mortar, blocks*), vitrified brick, and other building materials listed under *Other Industries*, including the various fireproof substitutes for nipa, are the objects of daily commercial transactions. The industries also include the staple foods of the native, such as polished rice and dried, salted, and smoked fish, enumerated in the tables under the heading of *Shrimp and Fish Drying and Salting Industries*, etc.

The foundries and iron-works, especially those of Manila, where in 1902 ordinary repairs were made to ships, and small engines and boilers were built for steam launches, have advanced the most in the industrial contest, because all kinds of machinery are being imported, such as tractors, threshing machines, automobiles, and motors of every pattern, as well as hardware of every description for shipyards, dockyards, dry docks, etc. It seems that the *Honolulu Iron Works* will bring to Manila its plant and equipment for the construction of sugar centrals answering the demands of the Orient. Should this be done, the Philippines will become the emporium of the Far East, and Manila one of the busiest ports of the world; at the same time she will be turned into an immense school for the practical mechanical training of designers, engineers, and mechanical inventors.

III. RICE.

This being the chief staple and an essential element of the native diet, which, instead of being exported, is imported in large quantities, the Office of the Census has prepared a supplementary schedule to Schedule 6, entitled "Manufactures," for rice mills, in order to show the amount of rice husked in the Islands for domestic consumption. This schedule is as follows: ¹

¹ To this supplementary printed schedule there has been added by handwriting the following question: "40. *In what months did this mill run and for how many days per month?*"

SECOND CENSUS, 1918.—SEGUNDO CENSO, 1918.

Rice and "palay" or "paddy" are not the same thing. Rice is the grain without the husk. The commercial and official weight of a *cavan* (the measurement unit) of husked rice is 44 kilos, and that of unhusked rice $57\frac{1}{2}$ kilos. Commonly, when the *palay* or unhusked rice is not of a superior or an inferior class, 50 *cavans* of husked rice (the main product), 8 to 9 *cavans* of bran (*tiqui-tiqui* or *darak*) and fine chaff (*binlid*), either mixed or separated, and about 40 *cavans* of husk are obtained from 100 *cavans* of unhusked rice. Ordinarily, the husk is used only as fuel, while the by-products cover the salaries paid to the employees and the cost of the lubricants. The by-products are also used as food for horses and swine, and the chaff is utilized for starch, among other things. Although the rice husk can be made into an article of commercial value, it is either given or thrown away.

According to the Census records, the number of the rice mills in 1918 was 452, and the capital invested in them ₱5,320,209.37. Two thousand four hundred fourteen laborers were working in the rice mills and received a total salary of ₱68,895.40. The cost of production amounted to ₱3,396,437.84, exclusive of the value of the principal raw material, the unhusked rice, while the value of the output aggregated ₱43,462,805.46 (Table 30).

The following tabulated statement will give an idea of the number of rice mills existing at the time when the Censuses of 1902 and 1918 were taken, and of the amount of capital invested, the cost and value of production, the number of laborers, the amount of their wages, and other data and details relative to provinces having no mills in 1903, but having such in 1918.

1903.....	8	445,008.00	267,044.00	544,653.00	227	3,519.00
1918.....	13	275,375.50	162,626.04	2,187,150.90	60	2,123.00
TOTAL (1918)	214	2,898,251.83	1,802,912.88	22,930,751.84	1,050	33,204.49

The following table shows the maximum and minimum prices of the rice in the years 1914, 1915, 1916, 1917, 1918, and the first half of 1919:

Year.	Minimum price.	Maximum price.
	<i>Pesos.</i>	<i>Pesos.</i>
1914.....	4.40	6.00
1915.....	5.25	6.50
1916.....	5.45	7.00
1917.....	5.60	8.00
1918.....	7.30	10.80
1919.....	9.80	18.50

This table shows that the minimum price, ₱4.40 per *cavan*, went up to ₱9.80, and the maximum price, ₱6.00, to ₱18.50, in the first half of 1919, which represents an increase of 123 per cent and 208 per cent, respectively, in little more than five years. Government intervention, however, reduced this maxi-

imum percentage to 171 per cent, and succeeded in maintaining it at this level to the first quarter of 1920. From 1917 to 1918, however, the minimum price of this commodity increased only 30 per cent, and the maximum price, 35 per cent.

Inasmuch as the large quantity of this cereal imported is a bad sign, the following table is inserted to show the rice produced and imported from 1902 to 1918:

Year.	Rice.			
	Production.		Importation.	
	Quantity.	Value.	Quantity.	Value.
	<i>Cavanes.</i>	<i>Pesos.</i>	<i>Cavanes.</i>	<i>Pesos.</i>

^a Calendar year.

NOTE.—The numbers that appear in the column of production correspond to the fiscal year ending June 30 of every year.

So alarming had been the quantity of rice imported that public opinion and the press were clamoring persistently for legislation to cure this defect. The public authorities, heedful of the popular outcry, enacted many laws intended to check the evil and encourage rice production. Usury was penalized; the Agricultural and National Banks and rural credit associations were created; funds were appropriated for irrigation purposes; rules and regulations for the insurance of labor animals were promulgated; duties were imposed upon imported rice, etc. All of this certainly encouraged the rice grower, whose condition had improved considerably in 1918.

However, notwithstanding the great impulse given and incentive offered, and in spite of the helpful attitude of the Government toward the rice-producing centers, the rate at which our rice production is growing will, perhaps, be reduced by the increased importance given by capitalists to abaca, copra, tobacco, and sugar, particularly the last two. Nueva Ecija and Pangasinan, the granaries of Luzon, are keeping an eye on tobacco. Pangasinan has lately not kept pace with Nueva Ecija in the production of rice, as she has found tobacco more profit-

able. Nueva Ecija, once famous for its tobacco crop, because during the monopoly of this article of the former government there was a central warehouse (*factoría*) of native tobacco established there, and for this reason the old capital of the province, San Isidro, was called *Factoría*, begins to relapse into its old habits, and in view of the example set by Pampanga, a neighboring province, it is possible that, besides abandoning the cultivation of rice for that of tobacco, she will now plant sugar cane wherever this can be done. A large contingent of laborers in the rice lands of the southern portion of Nueva Ecija, formerly called "Upper Pampanga," is made up of Pampangans, who, as such, are skillful makers of loaf-sugar. The enviable prosperity of Pampanga and a reasonable ambition on the part of the people of the province to extend their agricultural domain, which cannot be easily realized within its own comparatively small territory, will cause these sugar-cane planters to look to the sister provinces, Tarlac, Nueva Ecija, and Bulacan, the chief rice centers of Luzon, as they cannot expect to find anything in the provinces growing abaca, tobacco, and coconuts, and especially not in the sugar-producing provinces. So far as the rice cultivation is concerned, rice-growing will be left to the mountain people and squatters. Perhaps, with a powerful stimulus on the part of the Government, the rice production could be increased in the beginning by interisland migration, but migration in the Philippines is only resorted to in desperate cases, and it is very probable that then the immigrants will move toward the regions where sugar is bountifully produced. Another inducement for removing to this alluring promised land consists in the fact that it has railways and road systems, where 15 to 25 per cent of the 900 per cent, to which the minimum price of sugar has been raised, would be sufficient at present to meet any increase in the price of the imported rice, which 15 or 25 per cent could not be obtained by cultivating and milling rice instead of sugar.

It is quite possible that, owing to the inducement of the present high price, the area planted to rice and the care given to this crop, and consequently the next harvest, will be greater and may render the importation of rice unnecessary. However, in abnormal times, an agricultural product, after reaching top prices, generally goes down rapidly when the readjustment comes, and so the rice prices will fall in an extraordinary manner, more so than those of any other agricultural product. The reason for this is that the rice, being a staple food and an article consumed ex-

clusively within the country, will not receive any support from the banks nor any attention from the business men, and the rice planters in the country, being disseminated and lacking cohesion, will be the sufferers and will become an easy prey to the agitation of labor and the pressure from above, and to the profiteer,¹ to such

¹ While the present report was in the press, the following proclamation by the Governor-General, No. 6, of February 28, 1921, confirms what has been maintained in the text:

BY THE GOVERNOR-GENERAL OF THE PHILIPPINE
ISLANDS—A PROCLAMATION.

[No. 6.]

Whereas, the Philippine Legislature, in view of the abnormal economic situation, the partial paralysis of the market for local rice, the great excess of imports over exports and consequent drain upon the financial resources of the country, has deemed it wise to enact a law entitled "An Act authorizing the Governor-General to prohibit temporarily and for a fixed period the importation of rice," which act was approved on February twenty-eight, nineteen hundred and twenty-one; and

Whereas, after due investigation, the undersigned is convinced that there exist in the Philippine Islands at present sufficient quantities of *palay* and rice of local production, the normal consumption of which is seriously hampered by continuous and excessive importation of rice from abroad; and

Whereas, the said law authorizes the Governor-General to prohibit such importation by a proclamation which shall prevent any undue increase in the price of rice, by fixing a maximum price which shall continue during the time the proclamation is in force, and which shall not be greater than the actual market price on the date when the proclamation is published, and which shall in no case exceed ten pesos a cavan of fifty-seven and a half kilos for first-class rice in Manila;

Now, therefore, I, Francis Burton Harrison, Governor-General of the Philippine Islands, by virtue of the authority vested in me as Chief Executive of these Islands, and by virtue of the powers conferred upon me by section 1 of the said Act, do hereby proclaim, with the consent of the Council of State, that the importation of rice into the Philippine Islands from abroad is hereby prohibited from this date until June 30th, 1921, or until this proclamation is revoked in accordance with the provisions of section 2 of the said Act, except such quantities of foreign rice, the purchase of which are covered by bona fide contracts already existing on the date hereof.

During the period of the enforcement of this proclamation, the maximum selling prices of rice are hereby fixed as follows:

FOR MANILA.

Wholesale (per sack, including sack):

First class or all rice superior to what is known as *segunda blanco*, at ₱8.50 per sack of 57½ kilos;

Second class or *segunda blanco* and all other rice of the same quality, at ₱8 per sack of 57½ kilos;

Third class or all rice inferior to *segunda blanco* and superior to *pinawa* and like classifications, at ₱7.50 per sack of 57½ kilos;

Pinawa or any rice inferior to third class, at ₱7 per sack of 57½ kilos.

Retail (including wrapper):

First class or all rice superior to what is known as *segunda blanco*, at 38 centavos per ganta.

Second class or *segunda blanco* and all other rice of the same quality, at 36 centavos per ganta.

Third class or all rice inferior to *segunda blanco* and superior to *pinawa* and like classification, at 33 centavos per ganta.

Pinawa or any rice inferior to third class, at 31 centavos per ganta.

an extent that the price of the rice will fall from 45 to 75 per centum below the cost of production. In this respect the farmers on shares, on the other hand, will refuse to yield an inch of the territory conquered by them so far as advances and other advantages are concerned.

In the provinces exporting rice to Manila, the maximum wholesale or retail price shall be the Manila price, less the cost of transportation and necessary handling expenses from the place of sale to Manila, to be determined by the respective provincial treasurers. In provinces exporting directly to points other than Manila, the maximum price shall be determined by the respective provincial treasurers based on the current price prevailing in those provinces, but in no case shall it exceed the Manila price.

In provinces importing their supplies from Manila, other exporting provinces, or from any other center of distribution, the maximum price shall be as follows:

WHOLESALE (PER SACK, INCLUDING SACK).

The Manila wholesale price, or the authorized wholesale price at the place of supply or center of distribution, plus three per cent of said price and the transportation and necessary handling expenses from the place of supply or center of distribution to the place of sale, to be determined by the respective provincial treasurers.

RETAIL.

The Manila retail price, or the authorized retail price at the place of supply or center of distribution, plus the three per cent above authorized and the transportation and necessary handling expenses from the place of supply or center of distribution to the place of sale, to be determined by the respective provincial treasurers.

All appraisals and classification of rice in Manila and in the different provinces shall be subject to review and final determination, at the instance of any interested official, person or entity, by the Director of Commerce and Industry, who, under the general supervision of the Secretary of Commerce and Communications, is hereby designated to take charge of the enforcement of the provisions of this proclamation.

All contracts for importation of foreign rice into the Philippine Islands, existing on the date hereof, must be presented for registration in the Bureau of Commerce and Industry, in the case of rice importers whose main offices are located in Manila; in the commercial agencies of the same Bureau in Cebu and Iloilo, in the case of the rice importers whose main offices are, respectively, located in those cities; and in the office of the Provincial Treasurer of Zamboanga, in the case of rice importers whose main offices are located in that city, within forty-eight hours from midnight of the day this Proclamation is posted in a conspicuous place in the Bureau of Commerce and Industry, City Hall, and Ayuntamiento Buildings in Manila, and in the case of Cebu, Iloilo, and Zamboanga, from midnight of the day the telegraph notices are posted in a conspicuous place in their respective provincial buildings.

In witness whereof, I have hereunto set my hand and caused the seal of the Government of the Philippine Islands to be affixed.

Done at the City of Manila this twenty-eighth day of February, nineteen hundred and twenty-one.

[SEAL.]

FRANCIS BURTON HARRISON,
Governor-General.

This proclamation and the reasons on which it is based are eloquent, but the facts are still more so, because in addition to the market price being from 45 to 75 per centum lower than the cost of production, the rice-growers are having a desperate time selling their grain.

IV. SUGAR.

In regard to this commodity, in 1918 as in 1902, the difficulty of separating the cost of planting the cane from the cost of making the sugar, still prevails to a certain extent because the sugar-planter is at the same time the sugar-manufacturer, which circumstance prevents the fixing of the value of the principal material, the sugar cane. To this must be added the fact that it is impossible to record the number of the laborers and the amount of their wages, because said laborers are themselves sugar-planters. Nevertheless, many of the difficulties encountered in 1902 had largely disappeared in 1918, thanks to the establishment of the sugar centrals and modern sugar mills, because the sugar-planters prefer selling their cane to the centrals and mills to grinding it themselves.

The following table indicates the progress made by the sugar industry in the years that have elapsed from one census to the other, as well as the number of factories newly established in provinces where in 1902 sugar cane was not raised:

Sugar mills.

^a Two establishments of Capiz are included in Tarlac to avoid the disclosing of their business secrets.

^b Includes Ambos Camarines, 2; Lanaso, 1; Lepanto-Amurayan, 1; Mindoro, 2; Sorsogon, 1.

This table shows that there has been a general growth of the sugar industry. It further seems to indicate that the prosperity of Occidental Negros which, in 1902, already ranked first among all the provinces in the number of establishments, of which it had 531, declined in 1918, because said number has decreased; but as a matter of fact, this decrease has only strengthened its economic power and shows the excellent organization of its establishments and the modernization of its manufacturing methods. Its capital and profits, far from being reduced have doubled, and though the number of laborers employed is smaller, the production in 1918 amounts to 133 per cent more than that of 1902.

Table 43 supports this statement. The number of centrals recorded in this table is 17 (no information was obtained about one central); their total capital was ₱23,607,577.82; the value of the raw materials worked up, ₱5,908,237.72; the salaries and other expenses, ₱3,113,837.26; the average monthly number of workers and salaries, 3,266 and ₱94,633.53, respectively, and the total value of the output, ₱65,852,183.24. On the other hand, the sugar mills numbered 2,646, with an aggregate capital of ₱28,799,936.27; with raw materials valued at ₱7,759,207.33; expenses and salaries totaling ₱5,056,314.40; a monthly average of workers and wages of 67,456 and ₱1,312,167.10, respectively, and a total output worth ₱16,293,778.35. Therefore, although the number of the centrals was smaller (17 *vs.* 2,646), and in spite of the markedly smaller capital, raw materials, salaries, and laborers, those 17 centrals produced 60 per cent more than the percentage of production of the 2,646 sugar mills. All was due to the modern methods employed in manufacturing sugar, not to any improvement of cultivation, as the same kind of sugar cane was ground by both centrals and mills. The future of this industry is great. No scarcity of raw material is to be feared, as was the case with the oil, because the centrals are established *in the very districts where sugar cane is planted extensively* and an abundant supply is assured from estates in the vicinity. The more sugar is produced in the Philippines, the greater will the profits be. There was a deficit of about 4,000,000 tons in the world production of sugar in 1918. The contribution of the Islands to the total world production of sugar is only 1.28 per cent. With the area of the Philippines and the adaptability of her soil to sugar cultivation, the number of our centrals can be increased to twice that of Cuba, and the value of sugar will by no means go down on account of excessive

production. It is true that our market, the United States, lies at a considerable distance, and that the profits are apparently reduced by the freight expenses, but this disadvantage is compensated by the free entry of our sugar in the United States. Perhaps the geographical advantages of Hawaii and Cuba, together with their intense production and the high quality of their sugar, are at present a great obstacle to the Philippine sugar gaining a firm foothold in the American market, but the fact that the wages paid in those countries are twice as high as those paid in these Islands, tends to equalize the forces of the contestants. Japan and China are already big consumers of sugar which is supplied to them mostly by the American market. They do not draw sufficient sugar from the Philippines, Formosa, and Java because Cuba is included in the number of their purveyors. It must not be forgotten that Japan and China are our natural markets because of their nearness to the Philippines, and that the advantages which they offer are therefore of a permanent character, while the United States sugar market is merely artificial and its advantages only of a temporary nature. And since on account of the past war it will take Europe a long time to reëstablish her sugar industry, the status of the Philippine sugar is assured for many years to come.

The following table shows, by provinces, the number of sugar-manufacturing establishments (with the exception of three, about which no information could be obtained), their value, and the percentage of production of each of the sugar-producing provinces, according to the kind of motive power, i. e., steam, water, animal, or hand power:

Sugar Mills.

* Less than one-tenth of 1 per cent.

As will be seen, the percentage of the increase of production in 1918, as compared with that of 1902, was 1,144 per cent. The following statistics, which show briefly what goes out and what remains in the Islands, as well as the amount of sugar-cane harvested in the years specified, will give an idea of the progress of the sugar industry and of the amount of sugar exported:

Year.	Sugar.			
	Production. ¹		Export.	
	Quantity. ²	Value. ³	Quantity.	Value.
	Kilos.	Pesos.	Kilos.	Pesos.
1902			98,596,473	6,692,300
1903			85,307,972	6,650,468
1904			87,053,051	6,185,504
1905			108,498,717	10,146,466
1906			129,453,709	9,108,184
1907			127,917,216	8,391,342
1908			144,735,001	11,407,282

1918	430,685,694	41,158,779	273,258,396	31,608,780

¹ From Bureau of Agriculture.

² Does not include the amount of "basi" and molasses produced.

³ Including the value of "basi" and molasses produced.

NOTE.—The numbers that appear in the column of production are for the fiscal year ending on June 30 of every year.

In order that the annual rise in the sugar prices may be judged at a glance, we insert here a summary of the minimum and maximum prices in the years 1916, 1917, 1918, 1919, and the first quarter of 1920:

Year.	Manila.		Iloilo.		Centrifugal.		Batangas.		Ilocos.	
	Mini-mum.	Maxi-mum.	Mini-mum.	Maxi-mum.	Mini-mum.	Maxi-mum.	Mini-mum.	Maxi-mum.	Mini-mum.	Maxi-mum.
1916	4.25	6.50	4.50	7.50						
1917	3.00	6.50	4.25	7.25						
1918	5.40	6.25	4.25	6.75	10.50	10.50				
1919	5.50	30.00	6.50	31.00	15.50	33.00				
1920	19.50	32.00	19.00	31.00	30.00	39.00	22.00	23.00	19.00	21.00

We see, for instance, the minimum price of ₱3 per picul increased to ₱30, and the maximum price of ₱6.25 to ₱39, in the first quarter of 1920, which represents increases of 900 per cent and 524 per cent, respectively, within the brief space of three years.

The efficiency of the sugar centrals has already been shown, but the greatest benefit of the adoption of this system is that it redeems the sugar-planter from the economic slavery resulting

from his relationship with his commercial agent, the merchant. This slavery is described by a prominent sugar-planter as follows: "The merchant advances funds to the sugar-planter for the purpose of buying cattle and machinery and defraying other farm expenses. The money thus advanced is secured by a mortgage on the farm or the signature of a responsible person. In consideration of the money advanced, the planter binds himself: (1) To pay an annual interest of 10 to 12 per cent; (2) to consign all his sugar to the merchant at a commission of from $1\frac{1}{2}$ to 2 per cent on the gross value of his sugar; (3) to place his orders for supplies through the merchant, paying a commission of from 2 to 5 per cent on the cost thereof; (4) to ship his products on vessels of the merchant or such other ships as the merchant may select; and (5) to sell all his sugar to the merchant. As you see, the planter says, this contract is based on the vicious principle of the merchant being an agent for the planter and a speculator at the same time."

The establishment of sugar centrals brought about a new form of commercial organization which put the sugar-planter in contact with the banks, thus doing away forever with the unfair system above described, making the crop independent from the weather, and allowing the planter to reduce his capital and expenses and secure the maximum profit on his product, and affording him, in addition, an opportunity to obtain seeds for the next crop. Instead of being an economic dependent of the merchant, the planter is now able to do business direct with the banks, mortgage the receipts of the sugar deposited by him with the central, and sell his sugar without the forced intervention of the profiteer. Formerly, the planter was compelled to accept as *current price* the price offered by his agent, the speculator, which was 20 or 40 centavos less per picul than that offered by the buyer and exporter, and the current market price was for him always an undisclosed price. The final result was that if there was a tendency towards a rise in the price of the sugar, the merchant, being agent and speculator at the same time, compelled the planter to sell him his sugar, otherwise he would collect his account, because of an alleged lack of funds, and if the sugar prices showed a tendency to go down, he would advise the planter to keep his sugar, telling him that in the meantime his expenses would be defrayed by the merchant.

CONCLUSION.

Such are the subject-matters set forth in detail in Tables 1 to 44, which have been analyzed and briefly commented upon

under three heads: manufactures in general (Tables 1 to 29), rice (Tables 30 to 39), and sugar (Tables 40 to 44).

The progress, as we have seen, is not only due to the increased production, which is a natural consequence of the increase of population, but to the scientific manufacturing methods by which production is carried to its highest point. The scientific and commercial propaganda within and outside the Islands; the opportunities afforded by the war, which caused certain elements that had been idle to take advantage of the situation and secure a profit perhaps disproportionate to the efforts made and fitness shown, and the vast resources of the Islands, the exploitation of which yielded from the very beginning excellent results, added to a greater certainty regarding the political conditions and future of the Islands, whereby a profitable investment of capital was insured, and delivered the Filipino capital from its state of inactivity, and its taking its place by the side of the foreign capital and the ensuing commercial competition quickened the industrial development of the country. Some of the capitalists now engaged in active business life may suffer disappointment, as the present conditions are rather abnormal, but for the present the profits reaped are so high that a withdrawal of the capital is not yet warranted, unless labor, thru blindness, compels it to withdraw by the use of unfair methods. Of course, prosperity is spreading everywhere.

The tables are an eloquent proof of this prosperity and of the insufficiency of our production, but though they show a great deal, yet they do not disclose everything. To begin with the staple commodities: an outsider examining the tables dealing with nipa thatch, sawmills, stone-cutting, etc., would be inclined to assume that the islander lives in the air, but the fact is that he lives in a more or less comfortable house of light, mixed, or strong materials. Regarding his wearing apparel, if the tables on textile, hat, shoe, and slipper factories, etc., are to be relied upon, and a comparison is made of the contents of these tables with the population of the Islands, one would be led into believing that the Filipino wears no shoes, clothes, nor hats. The fact is, however, that many men wear shoes, slippers, clothes, and hats made in the Islands, and as to women, be they of low or high class, their skirts and undergarments, or at least their chemises and handkerchiefs are made of fabrics woven in the Islands. This explains why in places where, according to the tables, no cloth is woven, the inhabitants are carrying on a business in it.

The peddler from Batangas or Macabebe travels across fields and valleys carrying on his shoulder a bundle of cloth suspended from a fan-palm rod which is an offensive and defensive weapon and a yard stick at the same time. There is hardly a woman who does not go to the public market of the municipality to sell or buy *sinamay*, *jusi*, or *piña* cloth, or who does not do the same thing in her own house, if she is wealthy. As regards the staple food of the native, the rice, if one reads the tables dealing with rice and compares the same with the tables on bakeries, one would imagine that the Filipino eats more bread than rice, but the fact is that there is no Filipino home where rice is not pounded for daily use with implements which, though rather crude, do not deprive this cereal of its essential nutritive qualities nor of its fragrance, making it more savory and wholesome than the polished rice turned out by the modern mills, which sometimes is injurious to health. As regards tobacco and liquors, a glance at the tables gives the impression that the Filipino drinks and smokes more than he eats. The fact is that the Philippines is a country where drinking is little indulged in, and for this reason prohibition failed to succeed here. And while the men smoke, the great majority of the children and women do not, and the betel leaf, which is not found in the tables, is used more extensively than liquors, cigars, and cigarettes. An explanation of all these inconsistencies may be found in the fact that the industries reported by the schedule on *Manufactures* are those the total output of which amounts to ₱1,000 or more. There are, for instance, towns where nearly all the inhabitants are hat-makers, but where no establishment producing or selling hats was enumerated, because the unknown hat-makers were selling their wares from house to house or offering them for sale in other localities, without keeping any record of either the merchandise or its value. There is no objection to these articles being made by rather primitive methods; their special qualities, the originality or curiosity of their designs, and their general appearance make them highly attractive even to persons of refined taste, and make their manufacture profitable.

The above explanations are intended to show the real scope of the 44 tables given below, in order that no absolute, but only a relative importance be attached to them. Therefore, if they do not embrace everything, they nevertheless indicate what must be indicated.

PERCENTAGE OF THE VALUE OF PRODUCTION OF ALL MANUFACTURING ESTABLISHMENTS DURING THE YEAR 1918.

TABLE No. 1.—*Manufacturing establishments classified according to their number, capital invested, cost, and total value of production, by provinces and subprovinces.*

TABLE NO. 27.—Comparative table of the number of manufacturing establishments in 1918 and 1903, and their percentage of increase or decrease, by kinds of establishments.

TABLA No. 27.—Tabla comparativa del número de establecimientos manufactureros en 1918 y 1903, y el por ciento de aumento o disminución de los mismos por clases.

INDUSTRY. Industria.	NUMBER OF ESTABLISHMENTS. Número de establecimientos.		
	1903	1918	PERCENTAGE OF INCREASE (+) OR DECREASE (—). Por ciento de aumento (+) o disminu- ción (—).
ALL INDUSTRIES (Todas las industrias)	2,111	5,239	+ 148.2
Abacá pressing industry (Prensas de abacá)		27	
Abacá stripping industry (Desfibradoras de abacá)	38	67	+ 76.3
Bakeries and cake factories (Panaderías y confiterías)	358	638	+ 76.8
Basket weaving industry (Fábrica de cestos)		9	
Blacksmith shops (Herrerías)	43	141	+ 227.9
Boat building (Astilleros)	26	35	+ 34.6
Box factories (Fábricas de cajas para envases)	6	32	+ 433.3
Brick and tile factories (Fábricas de baldosas, tejas y ladrillos)	27	16	— 40.7
Candy factories (Fábricas de caramelitos)		13	
Canning industry (Fábricas de conservas)		4	
Caramel factories (Fábricas de caramelo)		27	
Carpentry shops (Carpinterías)	11	59	+ 436.4
Carriage factories (Carrucerías)	77	159	+ 106.5
Charcoal industry (Industria de carbón vegetal)		35	
Cigar and cigarette factories (Fábricas de tabacos y cigarrillos)	113	70	— 38.1
Clog factories (Fábricas de zuecos)	2	38	+ 1,800.0
Coffee and chocolate factories (Fábricas de chocolate y café molido)	22	52	+ 136.4
Coffin factories (Construcción de ataúdes)		15	
Comb and pipe factories (Fábricas de peines, peinetas y pipas)	4	7	+ 75.0
Copra drying industry (Preparación de copra)	37	349	+ 843.2
Corn mills (Molinos de maíz)		30	
Distilleries (Destilerías)	287	101	— 64.8
Dyeing industry (Tintorerías)	3	15	+ 400.0
Egg "balut" industry (Industria de huevos "balut")		14	
Embroidery shops (Talleres de bordados)		115	
Furniture and cabinetmaking shops (Talleres de muebles y ebanistería)	31	79	+ 154.8
Gas, electric light, and power plants (Fábricas de gas, luz y fuerza motriz eléctricas)	3	14	+ 366.7
Gaseous and mineral water factories (Fábricas de aguas minerales y gaseosas)	44	50	+ 13.6
Gold and silversmith, watch repairing, jewelry, and optical shops (Platerías, relojerías, joyerías y talleres de óptica)	47	180	+ 283.0
Gold mining industry (Explotación de minas de oro)		5	
Hat and umbrella factories (Fábricas de sombreros y paraguas)		7	
Hat factories (Fábricas de sombreros)	23	61	+ 165.2
Ice plants (Fábricas de hielo)	5	18	+ 260.0
Iron foundries and machine shops (Talleres de fundición y maquinaria)	29	23	— 20.7
Iron plough points (Puntas de arado)		12	
Jusi textiles (Tejidos de jusi)	34	24	— 29.4
Knife factories (Cuchillerías)	3	32	+ 966.7
Lard factories (Fábricas de manteca)		5	
Lime burners (Caleros)	37	23	— 37.8
Lithography, printing, and bookbinding shops (Litografías, imprentas y talleres de encuadernación)	35	74	+ 111.4
Macaroni, spaghetti, and vermicelli factories (Fábricas de salsas y pastas para sopa)		32	
Marble carving shops (marmolerías)	8	6	+ 100.0
Metal and rubber stamp factories (Fábricas de sellos de metal y goma)		4	
Mineral coal industry (Industria de carbón mineral)		3	
Musical instrument factories (Fábricas de instrumentos musicales)		13	
Native confectioneries (Preparación de golosinas)	8	244	+ 8,033.

• Excluding 73 rice mills. (Se excluyen 73 molinos de arroz.)

HOUSEHOLD INDUSTRIES.

HOUSEHOLD INDUSTRIES.

Report submitted by EPIFANIO DE LOS SANTOS,
Assistant Director of the Census.

I. SCHEDULE.

In view of the importance of the household industries in the Philippines, a special schedule was prepared for them and their enumeration was entrusted to the persons who had filled in the schedules for *Social Statistics* and *Manufactures*. Although this schedule was modelled after that for *Manufactures*, only household industries with an annual production valued at one hundred pesos and upward, without reaching one thousand pesos, were enumerated.

II. HOUSEHOLD INDUSTRIES.

As tabulated, the data compiled in the schedules give a total of 124,487 household industry establishments of every description, with a total production of ₱31,352,458.74 (Table 3). The details, i. e., the number of establishments of each kind, the total value of each industry, and the number of establishments and value of production by provinces (Tables 1 and 3,) are as follows:

(a) NUMBER OF ESTABLISHMENTS.

The following household industries have 500 or more establishments:

Native fiber textile industry.....	25,701
Spinning industry	12,080
Native hat industry.....	9,975
Native spirit industry.....	8,315
Native cotton textile industry.....	8,046
Copra drying industry.....	5,434
Buri mat industry.....	5,207
Tailoring	4,075
Abacá stripping industry.....	3,470
Cotton burlap industry.....	3,212
Native confectionaries.....	2,991
Nipa thatch industry.....	2,699
Embroidery making.....	2,360
Pottery	2,224
Buri sack industry.....	2,132
Fish drying and smoking industry.....	2,107
Salt making.....	1,837
Native sugar cake industry.....	1,554
Sabutan mat industry.....	1,507
Fishing net and fishing utensil industry.....	1,408
Oil industry.....	1,404
Sugar industry.....	1,275
Basket making.....	1,236
Gold and silver work.....	1,094
Blacksmithing	1,022
Confectionaries	974
Rope factories.....	831
Rice mills.....	785
Rattan and anahaw hat industry.....	680
Sawali industry.....	674
Furniture and cabinetmaking.....	605

(b) VALUE OF PRODUCTION.

Industries having a production of ₱100,000 or over are:

Native fiber textile industry.....	₱5,981,300.15
Native spirit industry.....	2,234,497.61
Native cotton textile industry.....	2,003,641.74
Spinning industry.....	1,930,869.65
Native hat industry.....	1,850,396.95
Tailoring	1,810,069.79
Copra drying industry.....	1,688,351.08
Native confectionaries.....	1,009,485.01
Buri mat industry.....	987,858.61
Fish drying and smoking industry.....	934,692.68
Cotton burlap industry.....	851,765.80
Abacá stripping industry.....	802,300.83
Embroidery making.....	724,161.98
Nipa thatch industry.....	625,293.44
Sugar industry.....	565,622.60
Gold and silver work.....	479,750.05
Blacksmithing	447,437.47
Pottery	434,227.88
Rice mills.....	394,751.20
Salt making.....	380,921.80
Oil industry.....	377,950.97
Native sugar cake industry.....	347,632.12
Buri sack industry.....	333,767.00
Sabutan mat industry.....	306,124.86
Confectionaries	268,080.53
Fishing net and fishing utensil industry.....	235,056.90
Basket making.....	210,829.32
Rope factories.....	207,909.90
Dressmaking	171,045.66
Furniture and cabinetmaking.....	165,379.24
Bakery	161,668.16
Native silk textile industry.....	143,005.20
Rattan and anahaw hat industry.....	137,345.34
Sawali industry.....	129,668.00
Carriage making.....	110,024.79
Refreshment parlors.....	107,698.04
Slipper making.....	106,570.73

(c) ESTABLISHMENTS, BY PROVINCES.

Provinces having 500 or more industrial establishments.

Iloilo	14,144
Batangas	13,411
Samar.....	9,780
Tayabas	9,241
Bohol	8,818
Cebu	5,666
Leyte	5,638

Bulacan	5,529
Ilocos Sur.....	5,349

Masbate (subprovince).....	100,110.09

With reference to the number of establishments and value of the output, Manila is not at the head of the list of household industries, but occupies the 32nd and 20th places, respectively.

The provinces which are making the most headway are Iloilo and Batangas. Iloilo, Batangas, Bohol, Bulacan, Ilocos Sur, Ambos Camarines, and Ilocos Norte are on the same level as regards the number of establishments and value of the output.

According to Tables 7 and 11, the provinces having the highest percentages as to the number of establishments are Iloilo, with 11.4; Batangas, with 10.8; Samar, with 7.9; Tayabas, with 7.4; and Bohol, with 7.1. The highest percentages as regards cost of tools and implements were obtained by the following provinces: Iloilo, 7.9; Cebu, 7.0; Tayabas, 6.3, and Batangas, 6.1; the percentages, of the other provinces did not reach 6 per cent. The provinces with the highest percentages as regards the value of the raw materials worked up are: Iloilo, with 17.7; Batangas, with 9.4, and Tayabas, with 8.7; the other provinces did not reach 8 per cent. Those having the highest percentages as regards operatives who were members of the family are: Batangas, 11.3; Iloilo, 8.8; Samar, 8.0; and Bohol, 7.7; in the other provinces the percentage was below 7 per cent. The provinces with the highest percentages as regards the value of production are: Iloilo, with 13.5; Batangas, with 8.3; Tayabas, with 7.7, and Samar, with 7.5; the percentages of the other provinces did not reach 7 per cent. The highest average values of utensils employed, per establishment, were recorded by the following provinces: Benguet, 326.92; Manila, 258.75; Lanao, 142.45; Tarlac, 110.92; and Agusan, 106.29; in the other provinces they did not reach 100. The highest average raw material values were returned by Manila, 290.04; Benguet, 235.48; Davao,

228.71; Bataan, 226.20; and Lanao, 206.80; in the other provinces they did not reach 200. As to laborers who were members of the family, Bataan, Batanes, Nueva Ecija, Pangasinan, and Zambales had each an average number of 3 workers; in the other provinces the average was less than 3. As to the value of the output per establishment, Manila reported 584.52; Davao, 509.19; Benguet, 505.89, and the others less than 500.

Classified by groups, the group of household industries using as material abacá, buri, coconut, sabutan, rattan, anahaw, cotton, silk, etc., heads the list with a production of ₱18,570,734.07; that of foods, dainties, and drinks has an output of ₱6,558,638.06; the group of other industries shows ₱5,409,431.89, and that of tools and various implements ₱813,654.72 (Table 4). Tables 10 and 14, showing, respectively, the percentages and averages of said groups, are completed by Tables 5 and 6, which enumerate the kinds of household industries existing in each province and those established in the provinces and subprovinces.

The information obtained was fairly approximate. There was generally an attempt on the part of the manufacturers to conceal their gains from the internal revenue agents. As these household industries were carried on in the interior of the islands and provinces, no division of labor nor even fixed working days and hours were observed, and as they were of secondary importance compared with agriculture, the people engaged in these household industries were mostly women and children who kept no record of their expenses and sales. Neither was it an easy task to determine the raw material used in 1918 and that purchased at the time of taking the Census. In fact, these industries are carried on during the leisure hours, contrary to what is the case in duly organized industries, such as the embroidery, weaving, hat, mat, and sack manufacturing, and other industries turning out commercial specialties of which a regular account is kept.

Among the household industries enumerated, the following are included in the section of *Manufactures*:

Abacá stripping.	Butter.
Artificial flowers.	Carts.
Bread and other bakery products.	Buri sacks.
Basket-making.	Caramels.
Blacksmithing.	Carriages.
Bookbinding.	Carpentering.
Packing cases.	Cement.
Brick and tile.	Charcoal.

Tobacco.
 Chocolate and coffee.
 Coffins.
 Combs.
 Confectionery.
 Copra.
 Cornmills.
 Millinery.
 Dyeing.
Balut eggs.
 Lithography and engraving.
 Embroidering.
 Fireworks.
 Fish salting and preserving.
 Furniture and cabinetmaking.
 Mineral and aerated waters.
 Silversmithing.
 Hatter's blocks.
 Oil, ilang-ilang.
 Indigo.
 Lime.
 Oil, lumbang.
 Lumber, sawed.
 Spaghetti, *misua*, *mique*, etc.
 Agricultural implements.
 Native cheese.
 Marble carving.
 Musical instruments.
 Native dainties.
 Cotton cloth.
 Weaving.
 Native hats.

Sugar cakes.
 Silk cloth.
 Native wines.
 Oil, coconut.
 Pastes.
 Photography.
 Pottery.
 Printing.
 Rattan, abacá, and bamboo ham-mocks.
 Rice mills.
 Cordage.
 Sail-making.
 Harness.
 Salt.
 Sculpture.
 Shoes.
 Slippers.
 Spinning.
 Stone work.
 Soap.
 Sugar-making.
 Tailoring.
 Tanning.
 Loom tools.
 Tinsmithing.
 Umbrellas.
 Vinegar.
 Vulcanizing.
 Candles.
 Dugouts.
 Clogs.

Real household industries—none having an output valued at ₱1,000 or over during the year—are those manufacturing the articles enumerated in the following groups:

(a) *Tools and utensils:*

Bolo hilts.
 Bolo scabbards.
 Saw frames.
 Hat blocks and wooden lasts.
 Wooden pails and troughs.
 Brushes.
 Brooms and dusters.
 Canton fiber strippers.
 Fishing implements and nets.
 Coconut shell cups (*tabos*).
 Whips.

(b) *Buri, coconut, sabutan, rattan, anahaw, and cotton products:*
 Buntal strips.
 Buri mats.

(b) *Buri, coconut, sabutan, rattan, anahaw, and cotton products—Continued.*

Buri strips.
 Native cigar cases.
 Buri mats for baling.
 Coir burlaps.
 Cotton tow.
 Anahaw and *sansoy* rain coats.
 Rattan and anahaw hats (*salacot*).
 Split rattan.
 Rattan and bamboo chairs and beds (*lancape*).
 Sabutan mats.

(c) *Foodstuffs, eatables, etc.:*

Buyo.
Salted beef.
Salted duck eggs.
Sausages.

(d) *Other industries:*

Firewood.
Gogo.
Stone starch mills.
Bamboo mills for unhusking
palay.

(d) *Other industries—Continued.*

Sugar mills.
Ink.
Lacemaking.
Miscellaneous coarse textures.
Sawali.
Tampipi.
Toys.
Weights and measures.
Chain-pumps.
Wooden saddles.

Besides the industries above enumerated, there are others of importance which have not been enumerated, either because the value of the annual production was less than one hundred pesos, or because reliable information thereon could not be obtained.

By using more or less primitive methods, the inhabitants of the mountains, fields, and coasts of these Islands utilize some resins and gums and certain textile and dyeing materials. From *anonang* (*Cordia myxa* L.) they extract a gum for gluing paper and guitar parts. By pounding and mixing rice husks with the resin exuded from the *anteng* (*Canarium villosum* [Miq.] F. Vill.), they obtain fuel for home use. With the lye of the *kulitis* (*Amaranthus spinosus* L.) they flavor certain sweetmeats, especially those called *kutsinta*, *putolansong*, and *suman sa lihia*, all made of glutinous rice (*malagkit*). From the white fiber of the *balanak*, which competes with that of the pineapple, they make guitar strings or fish lines; from the fibers of the *anilao* (*Grewia serrata* Blanco), *mulios* or *muliot*, *bilua* (*Macaranga*) and *pasaw* (*Corchorus olitorius* L.) they make hunting nets and every kind of rope. A large variety of rugs, "bahaques," blankets, buyo trays, and even fancy goods are made from the bark of the *aga* (*Ficus*), *balete* (*Ficus payapa* Blanco), and *salago* (*Wikstroemia ovata* C. A. Meyer). The use of dyestuffs is by no means unknown to the natives. The bark of the *sacat* yields a blackish dye with which they tinge their cloaks and mourning clothes; the bark of the *molave* yields a sky-blue dye, and that of the *sapang* gives a more or less dark crimson color. The *sapang* or *sibucan* (*Caesalpinia sappan*, L.) is used to dye cloth, hunting and fishing nets, buri mats, and furniture; its place is taken by the "nigui" (*Xylocarpus granatum* Koenig) on the Pacific coast. With the *dilaw* (*Curcuma longa* L.) they give blackish leather a russet color, and the anato or *achiote* (*Bixa orellana* L.) is used to make a kind of red ochre or Indian red.

As regards oleaginous plants, since the Philippine Regional Exhibition of 1895, eighty-four varieties of oil, among them

coconut oil, hedge tuba (*Jatropha curcass* L.) oil, and *tañgan-tañgan* (*Ricinus communis* L.) or castor oil, are known and are being made on a commercial scale. The home uses of oil, however, are limited to a special preparation of coconut oil for oiling and perfuming the hair, sesame oil for frying, and hedge tuba for lighting. There is, perhaps, no Filipino home without its stone for sharpening knives and bolos, consisting of soda or alumine silicate, calcareous stone, or bluish-green schist; there are also mortars and mills made of the same material. As regards kitchen utensils, bowls, spoons, and ladles of coconut shell or carabao horn are in general use; other well-known household implements are the curious *kalukati*, used for decorticating betelnuts (*Areca catechu* L.) and cutting them into small disks, and the not less curious *kalikut*, used for crushing buyo (*Piper betel* L.).

Passing now to the confectionery, pastry, and preserves of every kind, we must say that the Filipino woman has been and is very prodigal in this respect. It is common to see in the most modest dwellings sides of bacon, sun-cured fish, native dried and smoked or cured *talakitok*, preserved venison, jerked wild boar meat or beef, or pork and other sausages, hanging over the hearth. Rice flour biscuits called *potosecos*; pastry known as *alfajor*; very crisp biscuit in the form of a snail shell, called *gulguria*; puff pastes of wheat flour and lard, as exquisite as any made abroad; marchpanes of *casuy* and pili (this latter already used in North America, especially in California), fill large glass jars in the pantry or cupboard, by the side of which you will see preserve jars, standing in vessels with water for protection against the ants, with jams and preserves of native fruit, such as the camias, the rima, the guanabana, the fragrant nanca, the condol, and the sour santol, or butyraceous coconut (*makapunó*) and buri and nipa fruits; or mango, taro, yam, and tamarind and guáva jellies, and preparations of pineapple, etc., which may some day become articles of export, like the canned lanzones, which resemble the Chinese lichee.

One also often sees large pots containing pig's feet pickled in vinegar, sugar, and laurel (*humba*) leaves; or native curry more savory than that eaten by Europeans; or *cocido* or *olla* which differs from the Galician dish imported here. The aperitives and pickles most commonly used are made of *dampalit* (*Sesuvium portulacastrum* L.), *katuray* flowers (*Sesbania grandiflora* Pers.), sliced or grated unripe papayas, sometimes mixed with *sincamas*, *camias* (*Averrhoa bilimbi* L.) berries, the fra-

grant, delicious *paho* (*Mangifera altissima* Blanco), and chili (*Capsicum frutescens* L.) pepper, from which the hot Mexican tabasco sauce is made. There are also three kinds of pickles made of mangoes: the whole mango is pickled and preserved for years in pots, or it is prepared in the form known as *dalok*, or is made into a sweetish-sour, appetizing pickle, more savory than the *mango sweet sliced chutney* imported from Calcutta.

These home-made dishes and dainties are the creation and the result of the industry of the Filipino housewife (*patubong bahay*), and if their value could be estimated, the figure would far exceed the aggregate output of the household industries and a considerable portion of the output of the food-manufacturing industry. The products described are not of scant importance and consumed in small quantities like those of the confectionaries and restaurants enumerated, but are consumed daily and in considerable quantities, because in view of the hospitality peculiar to this country, they are not alone for the members of the family, but for any stranger that may come along, the door of the Filipino home being always open to everybody.

Recapitulating what we said before, the household industries enumerated are in the nature of manufactures, especially so far as the native textile industry is concerned. The materials used in this industry are abacá and pineapple fibers, cotton, *jusi*, and silk, either singly or in combination and in their ordinary form or polished, like the *pinukpuk* made of abacá. The abacá and pineapple fibers are grown in the country, and so is part of the cotton used, but the *jusi* and silk are imported in skeins from China. The cultivation of the mulberry tree and the breeding of silk worms are an old-established industry in the Philippine Islands, which was introduced in the Visayas as early as the year 1593 by Father Antonio Sedeño, a Jesuit. During the administration of General D. José Basco y Vargas (1778-1780), there were four and one-half million trees in Camarines. This industry was fostered by the *Real Sociedad Económica de Amigos del País*. It is said, moreover, that the worm living on the ricinus plant (*tañgan-tañgan*), which gives silk of a somewhat coarser type, of which the goods known here as raw silk and in India as *tusah*, are made, is not destroyed by the typhoons. If the silk of the cocoon of the largest night moth (*Attacus atlas*) of the Philippines could be easily spun, it could be used for making a coarser, but at the same time more resistant material than those in general use. The silk-worm industry had disappeared, but the Government has been taking measures to

revive it, under the auspices of the Bureaus of Agriculture and Science, and it seems to be well on the way to develop again. The cochineal industry was also known here once upon a time.

Among the industries that deserve to be encouraged because of their great necessity are the cheese industry and, especially, the manufacture of flour and feculae or starch from the yucca or *camoteng-kahoy* (*Manihot utilissima* Pohl), called tapioca or cassava, and from the palm species known as *buri* (*Corypha elata* Roxb.), *bagsang* (*Metroxylon sagu* Rottb), *lumbay* (*Metroxylon silvestre* Mart.), *cauong* (*Arenga pinnata* [Wurmb.] Merr.), or sugar-palm and *arurú* (*Maranta arundinacea* Linn.), from which arrowroot is made; from the *incamás* (*Pachyrrhizus erosus* Urban), and from the yam (*Dioscorea*). And it is assured that from the corncob excellent yeast can be made, besides other products, such as paste, acetate of lime, etc., which may some day develop into a regular industry.

III. FISHING INDUSTRY.

Fresh and sun-dried fish form with the rice such a principal component of the native diet that fishing is a very lucrative industry and is spreading rapidly through the coast regions of Luzon. In 1903 it was estimated that nine-tenths of the people of the Islands were using fish as a principal article of their diet, with an average annual consumption of 800 pounds per family, which figure varied according to whether the consumers were coast or inland people. The total annual consumption of fish then amounted to half a million long tons, and there were employed in this industry about 119,000 persons and 28,000 boats. These figures, however, were based on mere estimates of the inspectors of the Census of 1903. More detailed information taken from the very source was needed. To this end the Office of the Census prepared a supplementary schedule to *Schedule No. 7* and assigned the task of filing in said supplementary schedule to the agents who were charged of *Schedule No. 7*.

The fish industry enumerated refers mainly to fish ponds constructed for the breeding of *bañgus*, fish corrals or traps, fishing on boats, and pearl fishing.

The fish pond industry is of recent origin. The first fish pond was established in 1863 in the barrio of Concepción, municipality of Malabon, Rizal Province, by one Domingo Cornel. His example was followed by others of the same barrio and municipality, and in view of the success obtained, the industry developed and spread, first to the municipalities of Caloocan and Navotas, also in the Province of Rizal, then to the pueblos of the Province of Bulacan, chiefly Obando, Polo, Bulacan, and Hagonoy, and later to other coast towns of Luzon. Fish ponds have been constructed in practically all the municipalities bordering on Manila Bay and Lingayen Gulf.

The main features of this industry are the importation of the fry, the production of food algae, and the construction and operation of the ponds. The fry is locally known as *kawagkawag* and is imported from the coasts of Tayabas, Batangas, Mindoro, Marinduque, Bataan, Zambales, and La Union. In order to be successful, the owners and lessees of fish ponds must take care that the proper method has been used in gathering the fry; that it does not come from too distant a place; that it is conveyed with the greatest rapidity, and that the species of fish represented are homogeneous. The fry is generally carried in earthen

jars containing from 2,000 to 5,000 *kawagkawak*, and is caught and set out in the fish ponds in April and May.

The fish feed on an alga (*Oedogonium*), locally known as *verdin*, which either grows in the pond or is planted there. It thrives the best in the calm months of the year, that is, in March, April, and May.

Generally mangrove swamps are cleared to serve as fish ponds. Owing to the heavy taxes imposed by the Internal Revenue Law upon distilleries of nipa spirits, the majority of the nipa groves have been converted into fish ponds. The most suitable sites for these are marshes and river deltas. The ponds are generally rectangular or polygonal in form and have dams and banks capable of withstanding inundations and freshets. Rows of *bakawan* trees are planted in them, as they hold the soil together and break the violence of the currents.

The fish pond is provided with a stone or cement sluice or ditch, through the gate of which, which is provided with a Venetian blindlike arrangement or simply with a grating, the water flows in and out at the will of the caretaker of the pond. Connected with the ditch is a reservoir, with gates opening into the nursery (*bansutan*), and the fish pond proper. When a fish pond, owing to its extent, is divided into two or more compartments, the reservoir is provided with a gate for each compartment. In front of the sluice the caretaker's hut is usually erected. As soon as the nursery or fry compartment is ready, the water is turned into it and the jars of *kawagkawag* are emptied into the water. After a month the fry is transferred to the pond. Ordinarily three lots of fish are bred every two years, and 30 per cent is taken from each lot, of which 20 per cent goes to the nursery and 10 per cent to the pond. The regular lots are usually taken out in August and February. In August the *bañgus* is fully as big as it will be six months later, because in May, June, and July it grows and develops in an extraordinary manner. Sometimes only one-half of the fry is transferred and the other half left for the next catch or harvest.

The taking of *bañgus* is very easy and interesting. The compartment selected is drained of its water and the sluice gate is opened. The river or sea water flows then into the deposit and runs toward the pond. The *bañgus*, accustomed to swim against the current, rush through the gate of the pond and enter the reservoir. When the latter is full, the trap is closed and the fish is taken out and either placed in baskets or taken directly to market. The fish are anxious to breast the waves and struggle

with the intrushing flood so that they often batter their snouts by repeatedly jumping against the sluice gate.

In the artificial ponds no fish are grown but *bañgus* or milkfish (*Chanos chanos* Forskål). The marine lobsters, prawn, and crabs, and the lean *talankás*, which has a milky taste, are not raised or fattened by the caretaker, but manage to slip in from the river or the sea, or are from spawn which has unwittingly been mixed with the fry in the nursery. Those desiring to raise other fish species, such as the famous *lapulapu* (*Epinephelus albimaculatus* Seale¹), have to provide a separate compartment for them, otherwise the newcomers would devour the *bañgus*.

Fish corrals and fishing on boats have increased and the local markets are glutted with their output. But although 1,600 species of fish, almost all of them food fish, have been identified in Philippine waters, scarcely 100 species are marketed. The principal edible fish are the anchovy, the sardine, and the herring, and there are enormous quantities of lobsters, crabs, and oysters, and of milkfish (*bañgus*), etc. Among the game-fish, the jewfish, striped tunny (*talakitok*), swordfish, eel, and others are appreciated. The inhabitants of Sulu are expert catchers of sharks, the fins of which they sell to the Chinese at very high prices. Among the marine products of commercial value are the *trepang* or sea slug, tortoise shells, sponges, and shells for buttons and window-glazing, for which there is a great demand on the part of the manufacturers of lamp shades and screens.

For further information a list is given below of the species which, converted into *daing* or cured and prepared in the same manner as the imported anchovies, sardines, and herrings, are used by the islanders for their daily food:

- DILIS (anchovy) (*Anchovia commersoniana* Lacépède).
- DUMPILAS (anchovy) (*Anchovia dussumieri* Bleeker).
- TUNSOY (herring) (*Harengula moluccensis* Bleeker).
- TAMBAN (sardine) (*H. longiceps* Bleeker).
- SILINYASI (young herring) (*Harengula* sp.).
- ALAKAAK (drum) (*Umbrina Russellii* C. V.).
- ALIGASIN (mullet) (*Mugilidae*).
- TALILONG (*Mugil sundanensis* Bleek.).
- SAPSAP (slip mouth) (*Leognathus splendens* Cuv.).
- SALAYSALAY (*pompano*) (*Scomber microlepidotus* Rüppell).
- MALAKAPAS (majarritas) (*Xystaema kapas* Bleeker).

¹ Of the marine *lapu-lapu*, the following species are also known: *mega-chir* Richardson; *merra* Bloch, and *lanceolatus* Bloch. Of the last-named species, the Bureau of Science preserves a specimen which is 53 inches long and weighs 130 pounds.

Among the crustacea which ordinarily form part of the diet of the coast people, the following may be cited: sea crabs (*Ozius* sp. and *Neptunus philippinensis*); alimasag (*Lupea gladiator* Fabr. and *Thalamita crucifera* Fabr.); talangka (*Thelphusa indica* Lath); uluhán (*Palaemon ornatus* Oliv.); shrimp (*Pendus canaliculatus* Oliv.); the Philippine prawn or alupihan-dagat (*Squilla maculata* Lam.); the goose-barnacle (*Lepas polyceps*), the squid, and the shell fish called balay, tikhan, lukan, and paros.

In addition to the above listed, some of the following fish are of commercial value, being often found in the markets and easily disposed of, viz:

- AGUJA DE MAR (sea needle) (*Hemiramphus* sp.).
 ANGUILA (eel) (*Anguila* sp.).
 AGUUT (grunt) (*Sciaenidae*)
 APAHAP OR BAKOKO MORO (drum) (*Umbrina Russellii* Cuv. et Val.).
 AYUÑGIN (grunt) (*Pristipoma hasta* Forskål).
 BAGA-BAGA (soldier-fish) (*Myripristis murdjan* Forskål).
 BAGAONG (grunt) (*Therapon jarbua* Forskål).
 BAKOKO (porgy) (*Sparus calamara* Russell).
 BALANG OR PEZ VOLADOR (flying fish) (*Exocoetidae*).
 BALILA (band-fish) (*Trichiuridae*).
 BANAK (mullet) (*Mugil cephalus* Linn.).
 BAÑGOKÑGOK (*Mesoprion bohar* Forsk.).
 BARANGAN (herring) (*Ilisha hoevenii* Bleeker).
 BIKUDA (barracuda) (*Sphyræna langsar* Bleeker).
 BIA (goby) (*Gobidae*).
 BIA, BUNOG (gaby) (*Gnatholepis deltoides* Seale).
 BIANG-ITIM (goby) (*Glossogobius biocellatus* Cuv. et Val.).
 BIANG-PUTI (goby) (*Glossogobius giuris* Ham. Bunch.).
 BIDBID (ten-pounder) (*Elops saurus* Linn.).
 BONITO (oceanic bonito) (*Gymnosarda pelamis* Linn.).
 BUAN-BUAN (tarpon) (*Megalops cyprinoides* Broussonet).
 BUGUING (half-beak) (*Exocoetidae*).
 BUÑGAYÑGAY (goby) (*Rhinogobius oxyurus* Jordan et Seale).
 BUTETENG-SAGUING (puffer) (*Spheroides lunaris*, Blech. et Schn.).
 BUTETE (puffer) (*Tetraodontidae*).
 CABASI (bastard shad) (*Anodontostoma chacunda* Ham.-Buc.).
 CORVINA (sea-bass) (*Corvina miles* C. V.).
 DANGAT (wharf-fish) (*Priopis urotaenia* Bleeker).
 DORADO (gilt-head) (*Carangidae*).
 ESPADA (band-fish) (*Trichiuridae*).
 GUNO (silverside) (*Atherina temmincki* Bleeker).
 GARROPA OR MERO (grouper) (*Serranidae*).
 HASA-HASA (Japan mackerel) (*Scomber japonicus* Houttuyn).
 ISO (*Serranidae*).
 KABAYO-KABAYOHAN (sea horse) (*Gasterotokeus*).
 KALASO (lizard-fish) (*Saurida argyrophaneus* Rich.).
 KANDULI (catfish) (*Nettuma nasuta* Bleeker).

- KAPALO (goby) (*Illana cacabet* Smith et Seale).
 KITANG (butter-fish) (*Ephippidae*).
 LAPO-LAPO (grouper) (*Epinephelus merra* Bloch.).
 LAWIN (flying-fish) (*Parexocoetus mento* Cuv. et Val.).
 LENGUADO OR DAPÁ (sole) (*Solea orata* Richard).
 MAMALI (threadfin) (*Polynemidae*).
 MARTINICO (climbing perch) (*Anabas scandens* Daldorff).
 MAYAMAYA (red snapper) (*Lutianus dodecacanthus* Bleeker).
 MOONG (cardinal-fish) (*Amia chrysopoma* Bleeker).
 MUMUL, MOLMOL (wrasse) (*Choerops unimaculatus* Cartier).
 MULMUL (wrasse-fish) (*Callyodon latifasciatus* Seale et Bean).
 PAGUI (sting-ray) (*Dasyatis kuhli* Müller et Henle).
 PATING (shark) (*Scolliodon walbechmii* Bleeker).
 RODABALLO (turbot) (*Pseudorhombus Russellii* Bleeker).
 SAKUTIN (red-fish) (*Triacanthidae*).
 SAMARAL (siganuo) (*Siganus vermiculatus* Cuv. et Val.).
 SARAMOLLETE (goat-fish) (*Upeneus sulphureus* Cuv. et Val.).
 SILIW (garfish) (*Tylosurus giganteus* Temminck et Schlegel).
 SUWAGAN (*Dorosomatidae*).
 SUMBILANG (catfish) (*Plotosus anguillaris* Bloch).
 SUNOG (flathead) (*Platycephalus insidiator* Forskål).
 TALAKITOK OR CABALLA DEL PAÍS (cavallas) (*Carangidae*).
 TALAKITOK OR CABALLA (cavallas) (*Caranx sexfasciatus* Quoy et Gaimard).
 TALANG-TALANG (slippery dick) (*Scomberoides tolooparah* Rüppell).
 TANGUNGUE (Spanish mackerel) (*Scomberomorus commersoni* Lacépède).
 TULISAN (sardine) (*Sardinella clupeioides* Bleeker).

In the inland *pueblos*, where the people fish in rivers, lakes, swamps, puddles, and flooded rice fields, there is not such a variety of edible fish. Moreover, the fishing apparatus used there is much simpler. In the first place they have the *salambaw*, a bamboo raft supporting a lever with a net, from which the catch is taken by means of dip nets; next come drag-nets, traps, weirs, and harpoons. During the typhoon and storm season, however, when the coast people cannot go out to sea and fish is scarce, the inhabitants of the interior have plenty of cheap fish, because *dalag* and *hito* can be caught with nothing but sticks in the rice fields, and when there is a flood, shoals of mullet (*banak*) are trapped. Sea fish often enter fresh water and get used to it; according to connoisseurs, the flesh of such fish is lighter and more exquisite than that of the same species bred in salt water. Here is a brief list of the species caught in fresh water:

- ANGUILA (eel) (*Anguila* sp.).
 DALAG (mudfish) (*Ophiocephalus striatus* Bloch).
 RÓBALO (hitó) (*Clarias magur* Ham. Buch.).
 MARTINICO (climbing perch) (*Anabas scandens* Daldorff).

KITANG (butter-fish) (*Setophagus ornatus* C. V.).
 KANDULÍ (catfish) (*Netuma nasata* Bleeker).
 BAGRE (*Rita manillensis* C. V.).
 ISO (*Serranidae*).
 BANAK (mullet) (*Mugil cephalus* Linn.).
 GÓBIDO DE MANILA Y DE ANGAT (goby) (*Glossogobius giuris* Ham.-Buch.).
 BIANG-ITIM (goby) (*Glossogobius biocellatus* Cuv. et Val.).
 BIA (goby) (*Gnatholepis deltoides* Seale).
 BUAN-BUAN (tarpon) (*Megalops cyprinoides* Brssonet).
 LAÑGARAY (*Ambassis urotenia* Bleek).

To these certain crustaceans and shell fish are to be added, such as the river crabs (*Astacus* Gronov); the cocomo (*Cardisoma carnifera* Herbst); the crawfish called *uluhán* (*Palaemon ornatus* Oliv.); the river mussels (*Anedanta purpurea* Val.), particularly those called *tulya* and *sulib*, and numerous snails known as *pilipit* and *kuhol*, and the famous *igat* (*Jenkinsiella nectura* Jordan) living in and around saltworks, which is caught with the harpoon.

The raising of oysters is an industry carried on without much art and is still in its infancy. There is a great variety of them in Philippine waters. The edible species are *Ostrea cristagalli* L.; *O. Hyotis* L. and *O. palmipes* Sow. There is such an abundance of these oysters that they are almost a common article of food; but owing to the fact that they sometimes grow in contaminated water, they are condemned by some physicians as typhus carriers.

Trepang is a commodity exported exclusively to China. It is a holothurian known as sea-cucumber or sea-slug. In its commercial form it is called *balate*. The most appreciated species are *Holothuria tenuissima* Semp.; *H. similis* Semp.; *H. marmorata* Jag., and *H. scabra* Jag.

Although our seas and rivers furnish such an abundance of food, yet we are importing large quantities of it. Our salting and smoking methods are unscientific and the commercial preparation of the fish is inadequate. It resembles the preparation of sardines in the fresh state in foreign countries where these fish are put into rough wooden boxes, just as they are, and sent from one province to another. We should learn how to put up our sardines without fins and bones, in fine sesame oil, which is already being used for frying, or put them up with spices or in the form of paste, in cans with showy labels. The same could be said of the "royal fish," (silverside, *gunok*), the *talakitok*, and the squid, whose congeners, the oceanic bonito or

tunny and the cuttle fish, we also import. There are signs of the manufacture of a certain kind of anchovy in the Province of Abra, very similar to the *dulong* of the Province of Cavite. Pisciculture would surely be encouraged by a profitable exportation of our fish products. The pisciculturist would not only replenish his fish ponds with *bañgus*, but would breed other species with more delicious flesh and construct hatcheries both for sea and fresh water species. The introduction of the black sea-bass is a good example, since it proved successful. The raising of shrimps, crabs, and crawfish, aside from being a profitable investment, would supply the public demand for *lunó* crabs, that is, crabs caught at the moment of shedding their shell, when they are the softest and most delicious. The present practice of allowing these fish to grow spontaneously like fungi should be discontinued, because they sometimes taste of mud, and when served are very indifferent instead of a savory and strengthening food.

Pearl fishing is incidental to fishing for mother-of-pearl shells. There are some fishermen equipped with modern diving apparatus, helmets, waterproofs suits, pumps, etc. The mother-of-pearl shell is found in the waters of Sulu, Siassi, and the Tawi-tawi Islands. Typhoons or squalls are not propitious weather for this industry, and the fair and calm weather of the months of April, May, and June, and also of November, December, and January is preferred for this kind of fishing. This fishery is one of the early native trades. An Ilocano poem of the fifteenth or sixteenth century, entitled *Lam-ang*, narrates the deeds of the gallant pigmy hero of this name who was eaten by a shark while diving for shells in the waters of the Ilocos coast. *Lam-ang* had a foreboding of his tragical death, but he had to obey the orders of his village chief (*madama a capitan*), because fishing for mother-of-pearl was obligatory, and after performing a certain propitiatory ceremony, *Lam-ang* jumped into the water and perished as stated. Neither the old manuscripts nor official records say anything about this compulsory service, but such it was undoubtedly, as the poem says so openly and in detail in the words of the local chief (*ta sica ti mabatañgan—nga agbatoc iti rarang*). From the foregoing we also draw the important inference that pearl fishing was not only carried on in the southern, but also in the northern seas.

At present the mother-of-pearl shell is only found in the southern waters, mainly in Sulu, Palawan, and Mindanao. In the

northern seas the fishermen seem to catch edible mussels instead. Among the mother-of-pearl shells the species named *Avicula margaritifera* L. creates or engenders the pearl so highly prized in jewelry, which is a nacreous exudation of the material with which the animal builds its shell and is the result of a certain disease or of a superabundance of calcareous substance.

As to the malacological fauna, the Philippines are famous for their mollusks and are considered as the "mollusk paradise." They are so called in treatises on conchology. The commercial exportation of this product is, however, still unimportant. So far as shells for windows, lamp-shades, and screens are concerned, *Placuna placenta* L. is the species mostly used, as its valves are flat and can be easily trimmed. *Tridacna gigas* L., named "taclobo," because of its gigantic size, serves even as a font in churches and gardens. The species most sought are those used as raw material by button factories. Sometimes there is a scarcity of shells in the local factories because the supply is bought up by Japanese exporters, who invest more capital in this trade than anybody else. The United States is unable to import large quantities of Philippine shells and has to order them from Japan. The proximity of Japan, the low freight rates, and especially the fact that from the beginning of the war, North America had to get its supply from the factories of the neighboring empire, owing to the suspension of commercial intercourse between Germany and Austro-Hungary, the countries which were supplying shell to North America, on one side, and the United States on the other, are responsible for the exportation of our shells and pearls to Japan instead of North America. If we add to the above that the United States, besides supplying Canada, England, Australia, Brazil, and Cuba, has also to furnish Argentina, Mexico, and other Latin-American countries, all of which were customers of Germany before the war, it will be seen that the prospects of our export trade in mother-of-pearl and pearls with Japan and the United States are very promising.

The tables numbered from 16 to 20 show, by provinces, the citizenship and number of owners of fishing enterprises, the value of the product, and whether this product was obtained by means of artificial fish ponds or of corrals, nets or other fishing apparatus. Fishing was carried on in nearly all the provinces, forty-one in all. The value of the total production during the year 1918 amounted to ₱8,692,401.29. The number of native owners was 3,650 and that of foreign owners 118.

The following list is a summary of what we have said (Table 16) :

Province.	Natives.	Foreigners.	Production.
			<i>Pesos.</i>
PHILIPPINE ISLANDS	3,650	118	8,692,401.29

¹ Other provinces included.

Dealers in fish and fish products are not mentioned in these tables, but are included in the column *Fish salting and preserving industries* of the schedule for *Household Industries*, and in the chapter entitled *Shrimp and fish drying and smoking industry* of the schedule for *Manufactures*. This business is so extensive that there were 2,107 fish salting and smoking establishments in Manila and neighboring provinces, where the business is lucrative because they are the centers of distribution for the markets and shops of the interior.

Fish is plentiful. The fish ponds supply it throughout the year. In the dry season it is also supplied by fishing boats, and, above all, by traps (corrals), and in the rainy season, when typhoons, squalls, and floods are frequent, the market is supplied by persons fishing in fresh water and by those fishing at the confluences of fresh and sea water during stormy days and flood tides. Since

artificial ponds are not exposed to the action of the hurricanes like the corrals, they are in a constant state of production throughout the year and are more lucrative; but, on the other hand, the corrals, by an especially fortunate catch, or fishing boats, by a rich harvest of fish found in the nets which are let down to the bottom at ebb-tide, may make enough to cover one or more years' revenue.

At the time of the taking of the census there were 540 fish ponds, 531 of which were owned by natives and 9 by foreigners, with a total capital of ₱6,761,102.06, an average of 1,783 laborers per month, and ₱46,021.28 paid out in wages each month, on the average. These fish ponds covered 136,232,989 square meters; the cost of the fry used amounted to ₱261,898.17, and their income totaled ₱1,581,650.92.

The fish corrals enumerated numbered 1,853; 1,354 systems were owned by Filipinos (each system being composed of two or more corrals), and 24 by foreigners. One thousand nine hundred and eighty-nine boats were used in connection with these corrals, 1,293 of which were built in the sea, 54 in lakes, and 31 in rivers. The total capital invested amounted to ₱1,399,342.57; the monthly average of workers employed was 9,238; that of salaries paid, ₱202,769.31, and the total production, ₱2,901,375.07.

There were 5,651 fishing-nets, of which 1,580 were owned by Filipinos and 80 by foreigners. For carrying and operating the same, 2,038 boats and bancas were used. Of these, 1,364 were operated on the sea, 242 on lakes, and 54 on rivers. The capital invested aggregated ₱1,239,904.31; the average monthly number of workers was 13,815; that of salaries paid was 308,880.60, and the total value of the production was ₱3,798,557.12.

There were 2,191 other fishing apparatus, of which 185 were owned by Filipinos and 5 by foreigners. Of these, 109 were operated on the sea, 61 on lakes, and 20 on rivers. The total capital invested amounted to ₱213,578.06; the average monthly number of laborers was 1,290; the average monthly salaries paid totaled ₱23,745.71, and the total value of the output was ₱410,818.18.

In short, when the census was taken, there were, excluding the fish ponds, 2,766 fishing systems, consisting of corrals, nets, and other fishing apparatus, operated on the sea, 357 on lakes, and 105 on rivers, with an aggregate output valued at ₱7,110,750.37.

We must mention that for enumeration purposes, corrals, nets, and other apparatus belonging to a single owner were counted as one corral or one net, even though there were two or more corrals or nets.

The marine fishing apparatus most commonly used in the Philippine Islands are, first, the fish corral or *baklad*, built in form of a zigzag either in the sea or in a lake; then there is the drag-net, known as *pukut*, with which the fishermen gather the shoals of fish that have entered the corral, and which they raise to the top and empty out into the waiting boats. Other nets are the *panambán*, for catching the *tambán*; the *bating*, for the *tunsoy*; the *pangtukos*, for the *silinyasi*; the *panté*, for the crabs, and the *saklit*, a dip-net (*panalok*) used to transfer the fish from the net to the boat. The *pañgabayas* or *panghasáhasá*, or net for fishing *hasáhasá* (*Scomber japonicus* Houttuyn), is also frequently used. In the interior the fishermen use, besides the fishing rod, the *kitang*, a cord of varying dimensions, from which smaller cords with a hook at the end are suspended; they also practise fishing with brushwood.

The principal industries connected with fishery are the fish salting and smoking industries.

The species salted and sun-cured without having heads and inside removed are *dilis*, *tunsoy* or *laparán*, *bañgokñgok*, *sap-sap*, *aguja de mar*, swordfish, and *rompecandado*.

The following are salted and dried: *kanduli*, *bulig*, *hitó*, *martinico*, *malakapas*, *lañgaray*, *bakoko*, *talakitok*, tunny, cuttlefish, *bañgus*, and *aligasín*.

The species that are smoked are *tunsoy*, *laparán*, *tambán*, *silinyasi*, and *bañgus*.

These industries derived from fishery are generally carried on as household industries, and the finished product is generally kept in the chimney or pantry, ready to be fried or broiled.

Fish is also put up in pots or jars in vinegar, seasoned with ginger and berries; this is known as *paksiw*. Small fish are also put up in butter and are then called *pañgat*. But where the Filipino woman shines is in the preparation of certain native sauces. Among these, we may cite the *heko*, which is the far-famed Portuguese *balachang*; the shrimp sauce, improperly called "salmuera" (brine); the Philippine anchovy, or *bagong*; the characteristic oyster sauce, and, above all, the *atsike* of *banak* roe and *angkak* (rice dyed with *sibucão*), put up in vinegar with slices of lemon, which is more savory than mullet roe and its similar, caviar, the *oxygarium* of Lucullus and Caligula.

Resembling the *atsike* so far as condiments and spices are concerned are the preserves (*buros*) of *dalág*, *hitó*, etc., which when cooked, make excellent dishes.

Fishing has always been a favorite pastime, especially in the fish ponds, rivers, and lakes, where the best of native society is wont to go for an outing or picnic during the summer season.

The most usual amusement is fishing with bundles of brushwood in the rivers. These bundles are placed inside the fish corral beforehand, and the fish, but especially the shrimps known as *uluhán*, take refuge in them. On the day of the picnic a raid is made on these poor "refugees."

The most classic form of fishing is, however, that described in *Noli me tangere*. What rejoicing to the sound of the harp, accordion, and guitar, and what bucolic pleasures never to be forgotten! "Aunt Isabel" says:

"The *ayunñin* is good for the *sinigang*; leave the *biá* for pickling and the *dalág* and *buan-buan* for *pesà*; the *dalág* remain alive a long time. Put them in the net and keep them in the water. The lobsters go to the frying pan! The *bának* we shall roast, wrapped in banana leaves and stuffed with tomatoes."

This is almost an epitome of the entrées of the classic Filipino breakfast, which, from the lanzon to the mango season, is eaten "in the shade, by the side of the crystal-clear brook * * * amidst the flowers or under improvised shelters," on the brink of the river or lake, where all is fresh and wholesome, all home-grown (*patubong-bahay*), without the sight and smells of grease and blood characteristic of many markets and fish-dealer's places.

¹ In the country and mountains, the *dalag* is roasted inside a joint of caña-bojo, stuffed with finely chopped onions, tomatoes, and *alibangbang* or *alagaw*.

TABLE No. 1.—Household industries, classified by number of establishment, cost of tools, value of raw materials, number of laborers in the family, and value of production by provinces and subprovinces.

TABLE No. 1.—Industrias caseras clasificadas según el número de establecimientos, costo de los utensilios, valor de la materia prima, número de obreros en la familia y valor de la producción, por provincias y subprovincias.
